CATALOG PART NUMBER DESCRIPTION

MAE® Stepper Motors

AMETEK® Stepper Motors
EUROPE

offers a wide range of MAE brand stepper motor solutions. The HY series hybrid stepper motors feature low rotor inertia for maximum possible acceleration. The HN series hybrid stepper motors offer a calculated balance between low rotor inertia and high torque. The HS series hybrid stepper motors are optimized for superior torque characteristics. Additionally, both the HN and HS series feature low detent torque to holding torque ratios to provide smooth operation as well as the fine positioning capability required for microstep operation.

Motors may be customized with value added features including but not limited to: gearboxes, encoders, shaft details, leadwire-connector assemblies, and more.

All specifications shown are typical at 20 °C unless otherwise noted.

Shaft extensions

All motors can be supplied with single or double ended shaft.

Rotation

The motor rotation can run clockwise or counterclockwise, depending on the commutation.

Operating temperature

Ambient operating temperature -20 °C to +40 °C.

Number of leads

Refer to specifications of individual models for standard lead wire configuration. Motors can be supplied with 4, 6 or 8 leads upon request; however, rated current and torque may be reduced.

Angular accuracy

Standard angular accuracy is ±5 %. Angular accuracy is defined as the deviation from a theoretical position, in percentage of one step, after any number of steps.

Holding torque

The typical values of holding torque of the different models are indicated in the data charts. Holding torque is measured with two phases each supplied at the rated current.

Specifications and approvals

Motors are manufactured according to EN 60034-1:1995-02. Motors with drive voltage higher than or equal to 120 V are suitable to be fitted on machines equipped with additional insulation or when the motor itself has the grounding through its clamping screws. Due to thermal considerations, stepper motors cannot always be operated continuously in dynamic conditions at the level of their static rated phased current.

Stepper Motors

- Accurate open loop control for high performance positioning applications
- Excellent low speed torque
- Simple, rugged construction for high reliability and long service life
- Smooth, quiet operation
- Standard NEMA frame sizes
- Precision honed stators and ground rotors for tight air gap and maximum performance
- EUROPEAN DIRECTIVES
All motors comply with the requirements of applied European Directives and related Safety Standards
