# 3-BIT PROGRAMMABLE PULSE GENERATOR (SERIES PPG33F)

#### FEATURES

- Digitally programmable in 7 steps
- Monotonic pulse-width-vs-address variation
- Rising edge triggered
- Two separate outputs: inverting & non-inverting
- Precise and stable pulse width
- Input & outputs fully TTL interfaced & buffered
- 10 T<sup>2</sup>L fan-out capability
- Fits standard 14-pin DIP socket
- Auto-insertable

#### FUNCTIONAL DESCRIPTION

The PPG33F-series device is a 3-bit digitally programmable pulse generator. The width,  $PW_A$ , depends on the address code (A2-A0) according to the following formula:

$$PW_A = PW_0 + T_{INC} * A$$

where A is the address code,  $T_{\text{INC}}$  is the incremental pulse width of the device, and  $\text{PW}_0$  is the inherent pulse width of the device. The

incremental width is specified by the dash number of the device and can range from 0.5ns through 50ns, inclusively. RESET is held LOW during normal operation. When it is brought HIGH, OUT and OUT/ are forced into LOW and HIGH states, respectively, and the unit is ready for the next trigger input. The address is not latched and must remain asserted while the output pulse is active.

#### SERIES SPECIFICATIONS

- Programmed pulse width tolerance: 5% or 1ns, whichever is greater
- Inherent width (PW<sub>0</sub>): 9ns typical
- Inherent delay (T<sub>TO</sub>):  $3.5ns \pm 2ns$
- Operating temperature: 0° to 70° C
- Supply voltage V<sub>cc</sub>:  $5VDC \pm 5\%$
- Supply current: I<sub>CC</sub> = 41ma typical

#### **PIN DESCRIPTIONS**

TRIG	Trigger Input
OUT	Non-inverted Output
OUT/	Inverted Output
A0-A2	Address Bits
RES	Reset
VCC	+5 Volts
GND	Ground

#### DASH NUMBER SPECIFICATIONS

Part Number	Incremental Width Per Step (ns)	Total Width Change (ns)
PPG33F5	$0.5\pm0.3$	$3.50\pm1.00$
PPG33F-1	$1\pm0.4$	$7.00\pm1.00$
PPG33F-2	$2\pm0.4$	$14.0\pm1.00$
PPG33F-3	$3\pm0.5$	$21.0 \pm 1.05$
PPG33F-4	$4\pm0.5$	$\textbf{28.0} \pm \textbf{1.40}$
PPG33F-5	$5\pm0.6$	$\textbf{35.0} \pm \textbf{1.75}$
PPG33F-6	$6\pm0.7$	$42.0\pm2.10$
PPG33F-8	$8\pm0.8$	$56.0\pm2.80$
PPG33F-10	$10\pm1.0$	$70.0\pm3.50$
PPG33F-20	$20\pm1.5$	$140\pm7.00$
PPG33F-30	$30 \pm 1.8$	$210\pm10.5$
PPG33F-40	$40\pm2.0$	$280\pm14.0$
PPG33F-50	$50\pm2.5$	$350\pm17.5$

### **APPLICATION NOTES**

#### **DEVICE TIMING**

The timing definitions and restrictions for the PPG33F are shown in Figure 1. The unit is activated by a rising edge on the TRIG input. After a time,  $T_{TO}$  (called the inherent delay), the rising edge of the pulse appears at OUT. The duration of the pulse is given by the above equation. For the duration of the pulse, the device ignores subsequent triggers. Once the falling edge of the pulse has appeared at OUT, an additional time,  $T_{OTR}$ , is required before the device can respond to the next trigger.

At power-up, the state of the PPG33F is unknown. Consequently, after power is applied, the unit may not respond to input triggers for a time equal to the maximum pulse width,  $PW_T$ . After this time, the unit will function properly. If your application requires that the device function immediately, issue a quick reset at power-up.

#### POWER SUPPLY BYPASSING

The PPG33F relies on a stable power supply to produce repeatable pulses within the stated tolerances. A 0.1uf capacitor from VCC to GND, located as close as possible to each VCC pin, is recommended. A wide VCC trace should connect all VCC pins externally, and a clean ground plane should be used.

#### **INCREMENT TOLERANCES**

Please note that the increment tolerances listed represent a design goal. Although most increments will fall within tolerance, they are not guaranteed throughout the address range of the unit. Monotonicity is, however, guaranteed over all addresses.
