

Surge Protection

for Signalling Networks

2014

ISKRA ZAŠČITE

BE ON THE SAFE SIDE

Dr. Otmar Zorn

PRESIDENT'S FOREWORD

Dear Reader,

We are pleased to introduce our 2014 Catalogue for Surge protective devices intended for use in signalling networks. This edition includes updated product information and upgraded section with typical applications.

ISKRA ZAŠČITE is a leading designer and manufacturer of surge protection products with a strong customer-oriented culture fostered throughout the company. We believe a comprehensive understanding of our customers' needs and of the industry in which they operate is crucial to our ability to develop effective products and solutions.

Our success in bringing you the best products we can, is driven by our people and their commitment to excellence. These attributes are encouraged in all aspects of our operations - from our qualified research and development engineers many of whom hold higher degrees, to our dedicated manufacturing staff and continuing education programs which ensure skill-sets keep pace with our newer process control capabilities and automated test equipment.

As a leader in our industry, we believe we share responsibilities beyond those we owe to our customers and partners (to ensure our dealing adhere to the highest standards of business integrity) and beyond those we owe to our employees (to ensure a safe and pleasant working environment), but we also owe an obligation to care for our environment and to minimize the impact we have upon it.

We are proud of the many ways in which we work to safeguard this. Our products are RoHS compliant, our manufacturing facility is currently ISO 9001 certified and we are now in the advanced stage of moving towards ISO 14001. We also believe that we owe an obligation to give back to our industry as a whole. This we do through such activities as educational seminars and participation in standardization committees.

With our strong customer focus, stringent quality measures, compliance to relevant safety and performance standards, comprehensive testing and manufacturing facilities and good relations with suppliers, we are reassured that ISKRA ZAŠČITE and its products are well placed to face the demands of our evolving electrical industry with its growing sensitivity to overvoltages surges and transients.

Ljubljana, Slovenia, EU, 2014

President and Owner

SPD for Local Area Networks (LAN)	85
SPD for Data Protocol	95
Various Data SPD Line Fitting, Terminal Connection, PCB Mounting	103
SPD for Coaxial/RF Systems	111
Combined Plug-in SPD	137
Selection Guide	143
Typical Applications	145
Product Index	149

Introduction

Recommended selection table for Surge Protective Devices (SPDs)

Recommended selection table for SPDs for the use in (zone) interfaces according to IEC 62305-1 and IEC 61000-4-5, based on correlation between standards IEC 61643-11 and IEC 61643-21.

Lightning protection zones	Test class of SPD in acc. to IEC 61643-11	Category of SPD in acc. to IEC 61643-21
0/1	Test class 1	D1
1/2	Test class 2	C2
2/3	Test class 3	C1

Typical components used in SPDs

Voltage-limiting and current limiting devices

Voltage-clamping devices

Varistor (MOV)

A varistor is a bipolar, non-linear resistor with symmetrical voltage-current characteristics, where the resistance decreases with increasing characteristic curve.

Transient Voltage Suppression (TVS) diode

A TVS diode is clamping device that limit voltage spikes by the low impedance avalanche breakdown of the P/N junction. TVS diode contains a P/N junction similar to a Zener diode but with a larger cross section, which is proportional to its surge power rating. TVS diode has a very short response time, making it suitable for limiting fast rising transient voltages.

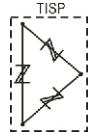

Voltage-switching devices

Gas discharge tube (GDT)

A GDT is an arrangement of electrodes in a gas within an insulating, temperature-resistant ceramic or glass cylinder. Because of their switching characteristic and rugged construction, GDTs exceed other component in current carrying capability.

Thyristor surge suppressor (TSS) Fixed voltage types

A Thyristor surge suppressor is voltage-switching device where above a certain breakdown current, the NPnP structure regenerates and switches to a low voltage condition. The multiple PN junctions of the TSS reduce the overall capacitance.

Current limiting devices

Positive temperature coefficient resistor (PTC resistor)

PTC resistors are ceramic components whose electrical resistance rapidly increases when a certain temperature is exceeded. An overcurrent condition causes the devices to increase their resistance, thus reducing current flow.

Regulations

1. IEC 61643-21:2009 (VDE 0845-3-1)	Low voltage surge protective devices - Part 21: Surge protective devices connected to telecommunications and signaling networks - Performance requirements and testing methods;
2. IEC 61643-22:2004	Low-Voltage Surge Protective Devices - Part 22: Surge protection devices connected to telecommunications and signaling networks - Selection and application principles;
3. IEC/EN 61643-11:2011 (VDE 0675-6-11)	Surge protective devices connected to low voltage power distribution systems - Requirements and test methods;
4. IEC 61643-12:2008 (VDE 0675-6-12)	Surge protective devices connected to low voltage power distribution systems - Selection and application principles;
5. IEC 60364-5-53:2001 (VDE 0100-534)	Electrical installation of buildings - Part 5-53: Selection and erection of electrical equipment - isolation, switching and control;
6. IEC PAS 60099-7:2004	Surge arresters - Part 7: Glossary of terms and definitions from IEC publications 60099-1, 60099-4, 60099-6, 61643-11, 61643-12, 61643-21, 61643-311, 61643-321, 61643-331 and 61643-341;
7. IEC 61000-4-5:2005 (VDE 0847-4-5)	Electromagnetic compatibility (EMC) - Part 4-5: Testing and measurement techniques - Surge immunity test;
8. IEC 62305-1:2010 (VDE 0185-305-1)	Protection against lightning - Part 1: General principles;
9. IEC 62305-2:2010 (VDE 0185-305-2)	Protection against lightning - Part 2: Risk management;
10. IEC 62305-3:2010 (VDE 0185-305-3)	Protection against lightning - Part 3: Physical damage to structures and life hazard;
11. IEC 62305-4:2010 (VDE 0185-305-4)	Protection against lightning - Part 4: Electrical and electronic systems within structures;
12. ITU-T K.20:2008	Protection against interferences: Resistibility of telecommunication switching equipment to overvoltages and overcurrent;
13. ITU-T K.21:2008	Protection against interferences: Resistibility of subscriber's terminal to overvoltages and overcurrent;
14. ITU-T K.44:2011	Protection against interferences: Resistibility test for telecommunication equipment exposed to overvoltages and overcurrent - Basic Recommendation;
15. IEC 60099-1:1999 (VDE 0675-1)	Surge arresters - Part 1: Non-linear resistor type gapped surge arresters for a.c. systems
16. IEC 60099-4:2009 (VDE 0675-4)	Surge arresters - Part 4: Metal-oxide surge arresters without gaps for a.c. systems
17. IEC 60099-5:2000 (VDE 0675-5)	Surge arresters - Part 5: Selection and application recommendations;
18. IEC 60038:2009 (VDE 0175-1)	IEC standard voltages
19. UL 497B	Protectors for data communication and fire-alarm circuits
20. IEC 62497-2:2010	Railway applications - Insulation coordination - Part 2: Overvoltages and related protection
21. EN 50526-1:2012	Railway applications - Fixed installations - D.C. surge arresters and voltage limiting devices - Part 1: Surge arresters
22. EN 50123-5:2003	Railway applications - Fixed installations - D.C. switchgear - Part 5: Surge arresters and low-voltage limiters for specific use in d.c. systems
23. EN 50122-1:1998	Railway applications - Fixed installations - Part 1: Protective provisions relating to electrical safety and earthing
24. IEC 60364-7-712:2002	Electrical installations of buildings - Part 7-712 : Requirements for special installations or locations - Solar photovoltaic (PV) power supply systems
25. HD 60364-7-712:2005	Electrical installations of buildings - Part 7-712: Requirements for special installations or locations - Solar photovoltaic (PV) power supply systems
26. EN 61173:2001	Overvoltage protection for photovoltaic (PV) power generating systems - guide32. SIST EN 61400-1:2006 /A1:2011 Wind turbines - Part 1: Design requirements (IEC 61400-1:2005/A1:2010)
27. IEC TR 61400-24:2010	Wind turbine generator systems - part 24: Lightning protection
28. EN 50539-12:2013	Low-voltage surge protective devices - Surge protective devices for specific application including d.c. - Part 12: Selection and application principles - SPDs connected to photovoltaic installations
29. EN 50539-11:2012	Low-voltage surge protective devices - Surge protective devices for specific application including d.c. - Part 11: Requirements and tests for SPDs in photovoltaic applications
30. IEEE 802.3at	Power over Ethernet enhancements

SMH-SH Series

Category IEC/EN:	D1/C1/C2/C3
Mode of protection:	Longitudinal, Transverse
Coarse Protection:	3 terminal GDT
Available voltages:	5, 12, 15, 24, 30, 48, 60V, 110VDC
Frequency range:	30MHz
Surge Discharge Ratings:	$I_n: 10\text{kA}, I_{max}: 20\text{kA}, I_{imp}: 2.5\text{kA}$
Series load current:	1A
Enclosure:	DIN 43880 2/3TE, DIN rail mount
Terminals:	Stranded to 4 mm ²
Housing:	Modular design
Complies with:	IEC/EN 61643-21

The SMH-SH series of surge protective devices has been developed to protect against the effects of induced voltages onto data, signal and communication circuits.

The circuit topology consists of a multi-stage protector providing both common (longitudinal) mode and differential (transverse) mode protection.

Coarse protection is provided by a three terminal gas

discharge tube, while fine protection is provided using a high speed silicon avalanche diodes or metal oxide varistor stage. Care is taken to ensure coordination between these two stages without voltage or surge current blind spots occurring.

Thermal protection is provided to reduce the hazards of thermal runaway should there be an inadvertent mains incursion fault. Both common (longitudinal) mode and differential (transverse) mode protection is provided.

If the module is unplugged out of the base, the connection lines remain enabled.

SMH-RC Series

Category IEC/EN:	D1/C1/C2/C3
Mode of protection:	Longitudinal, Transverse
Available voltages:	5, 12, 15, 24, 30, 48, 60, 110VDC
Frequency range:	30MHz
Surge Discharge Ratings:	$I_n: 10\text{kA}, I_{max}: 20\text{kA}, I_{imp}: 2.5\text{kA}$
Series load current:	1A
Enclosure:	DIN 43880 2/3TE, DIN rail mount
Terminals:	Stranded to 4 mm ²
Housing:	Modular design
Complies with:	IEC/EN 61643-21

The SMH-RC series provides the same level of protection and technical performance as the SMH-TC series, but also provides the feature of an additional set of voltage free contacts which can be used for remote signalization and monitoring of the device's status. If the unit fails, the contacts change state.

These barriers provide both coarse and fine protection stages and offer longitudinal and transverse protection.

The initial protection stage comprises a three-pole gas discharge tube and is designed to divert the primary surge energy. The subsequent fine protection stage is implemented using fast bi-directional silicon avalanche diodes. Special design techniques have been employed in the design of the fine

protection stage to avoid capacitive line loading and thereby ensure a low insertion loss and wide operating frequency range.

Series line impedance are used to ensure energy co-ordination between the coarse and fine protection stages irrespective of the magnitude of the incident surge. To protect against the hazards of electric shock and fire, which may result when power frequency contact occurs between power and communication lines (often called mains incursion), a thermo-clip is included in the primary protection stage to divert the power frequency current to the ground.

The plug-in module/base design facilitates replacement of a failed module without the need to remove system wiring.

If the module is unplugged from the base, the through-connection is maintained, allowing continued operations while a replacement module is ordered.

SMI2 Series

Category IEC/EN:	D1/C1/C2/C3
Mode of protection:	Longitudinal, Transverse
Available voltages:	5, 12, 15, 24, 30, 48, 60, 110VDC
Frequency range:	30MHz
Surge Discharge Ratings:	$I_n: 10\text{kA}$, $I_{max}: 20\text{kA}$, $I_{imp}: 10\text{kA}$
Series load current:	1A
Enclosure:	DIN 43880 2/3TE, DIN rail mount
Terminals:	Stranded to 4 mm ²
Housing:	Modular design
Complies with:	IEC/EN 61643-21

The SMI2 series provides the same electrical performance as the SMH2-TC series but with a greater surge withstand level or **limp 10kA**, (5 kA per line). It is intended for operation in electrical environments where higher exposure to the effects of direct or partially direct lightning currents may be experienced. These include wind turbines and PV installations where lightning exposures are more severe, but where protection of sensitive electronics, such as environmental sensors, is just as crucial. These barriers provide both coarse and fine protection stages and offer longitudinal and transverse protection.

The initial protection stage comprises a three-pole gas discharge tube and is designed to divert the primary surge energy. The subsequent fine protection stage is implemented

using fast bi-directional silicon avalanche diodes. Special design techniques have been employed in the design of the fine protection stage to avoid capacitive line loading and thereby ensure a low insertion loss and wide operating frequency range. Series line impedance are used to ensure energy co-ordination between the coarse and fine protection stages irrespective of the magnitude of the incident surge. To protect against the hazards of electric shock and fire, which may result when power frequency contact occurs between power and communication lines (often called mains incursion), a thermo-clip is included in the primary protection stage to divert the power frequency current to the ground.

The plug-in module/base design facilitates replacement of a failed module without the need to remove system wiring.

If the module is unplugged from the base, the through-connection is maintained, allowing continued operations while a replacement module is ordered.

SMH-TC Series

Category IEC/EN:	D1/C1/C2/C3
Mode of protection:	Longitudinal, Transverse
Coarse Protection:	3 terminal GDT
Available voltages:	5, 12, 15, 24, 30, 48, 60, 110VDC
Frequency range:	30MHz
Surge Discharge Ratings:	I_n : 10kA, I_{max} : 20kA, I_{imp} : 2.5kA
Series load current:	1A
Enclosure:	DIN 43880 2/3TE, DIN rail mount
Terminals:	Stranded to 4 mm ²
Housing:	Modular design
Complies with:	IEC/EN 61643-21

These efficient overvoltage barriers contain both coarse and fine protection stages and provide longitudinal and a transverse surge protection.

The initial protection stage comprises a three-pole gas discharge tube and is designed to divert the primary surge energy. The subsequent fine protection stage is carried out using fast bi-directional silicon avalanche diodes. Care is taken in the design of this fine protection stage to avoid capacitive line loading and thereby ensuring a low insertion loss and wide

operating frequency range.

Series line impedances ensure energy co-ordination between the coarse and a fine protection stages at all levels of the incident surge. To protect against the hazards of electric shock and fire which often results when power frequency contact occurs between power and communication lines (often called mains incursion), a thermo-clip is included on the primary protection stage to divert the power frequency current to ground.

The plug-in module/base design facilitates replacement of a failed module without the need to remove system wiring.

If the module is unplugged out of the base, the connection lines remain enabled.

SMH2-TC Series

Category IEC/EN:	D1/C1/C2/C3
Mode of protection:	Longitudinal, Transverse
Coarse Protection:	3 terminal GDT
Available voltages:	5, 12, 15, 24, 30, 48, 60, 110VDC
Frequency range:	30MHz
Surge Discharge Ratings:	I_n : 10kA, I_{max} : 20kA, I_{imp} : 5kA
Series load current:	1A
Enclosure:	DIN 43880 2/3TE, DIN rail mount
Terminals:	Stranded to 4 mm ²
Housing:	Modular design
Complies with:	IEC/EN 61643-21

Like the SMH-TC series, the SMH2-TC provides the same level of protection to two independent circuits (pairs). A number of protection voltages are available to ensure the user is able to select the closest clamping voltage to the normal signal operation of the equipment being protected.

The plug-in module/base design facilitates replacement of a failed module without the need to remove system wiring.

If the module is unplugged out of the base, the connection lines remain enabled.

NMH-TC Series

- Category IEC/EN: D1/C1/C2/C3
- Mode of protection: Longitudinal, Transverse
- Coarse Protection: 3 terminal GDT
- Available voltages: 5, 12, 15, 24, 30, 48, 60, 110VDC
- Frequency range: up to 35MHz
- Surge Discharge Ratings: $I_n: 10\text{kA}$, $I_{max}: 20\text{kA}$, $I_{imp}: 2.5\text{kA}$
- Series load current: 1A
- Enclosure: DIN 43880 2/3TE, DIN rail mount
- Terminals: Stranded to 4 mm²
- Housing: Compact design
- Complies with: IEC/EN 61643-21

These efficient overvoltage barriers contain both coarse and fine protection stages and provide longitudinal and a transverse surge protection.

The initial protection stage comprises a three-pole gas discharge tube and is designed to divert the primary surge energy. The subsequent fine protection stage is carried out using multiple metal-oxide varistors or with fast bi-directional silicon

avalanche diodes. Care is taken in the design of this fine protection stage to avoid capacitive line loading and thereby ensuring a low insertion loss and wide operating frequency range.

Care is taken to ensure energy co-ordination between the coarse and a fine protection stages at all levels of the incident surge. To protect against the hazards of electric shock and fire which often results when power frequency contact occurs between power and communication lines (often called mains incursion), a thermo-clip is included on the primary protection stage to divert the power frequency current to the ground.

IM-TD Series

- Category IEC/EN: D1/C1/C2/C3
- Mode of protection: Longitudinal, Transverse
- Coarse Protection: 3 terminal GDT
- Available voltages: 5, 12, 15, 24, 30, 48, 60, 110VDC
- Frequency range: 0.6 - 10MHz
- Surge Discharge Ratings: $I_n: 10\text{kA}$, $I_{max}: 20\text{kA}$, $I_{imp}: 2.5\text{kA}$
- Series load current: 145mA (1A for 110V version)
- Safety: Internal thermal runaway disconnector
- Indication: 2 x end-of-life status flag
- Enclosure: DIN 43880 1TE, DIN rail mount
- Terminals: Stranded to 6 mm²
- Housing: Modular design
- Complies with: IEC/EN 61643-21

The IM-TD series of surge protective devices has been developed to protect against the effects of induced voltages onto data, signal and communication circuits.

It consists of a multi-stage protector providing both common (longitudinal) mode and differential (transverse) mode protection.

Coarse protection is provided by a three terminal gas

discharge tube while fine protection is provided using a high speed silicon avalanche diodes or metal oxide varistor stage. Care is taken to ensure coordination between these two stages without voltage or surge current blind spots occurring.

Overcurrent protection is provided by a PTC element, which provides a level of protection against short circuit or mains incursion. Internal thermal disconnectors are also employed to reduce the hazards of thermal runaway during fault conditions.

Accessory Part for IM-TD

Testing module IM TEST is intended for performing measurements on the IM bases. A module enables performing of the measurements on both input and output sides. It is equipped with five banana sockets with D = 2 mm. Red terminals are connected to the module's output, blue ones are connected to the module's input, whereas yellow one is connected to the grounding contact.

IMH-TC Series

- Category IEC/EN: D1/C1/C2/C3
- Mode of protection: Longitudinal, Transverse
- Coarse Protection: 3 terminal GDT
- Available voltages: 5, 12, 15, 24, 30, 48, 60, 110VDC
- Frequency range: up to 35MHz
- Surge Discharge Ratings: $I_n: 10\text{kA}$, $I_{max}: 20\text{kA}$, $I_{imp}: 2.5\text{kA}$
- Series load current: 1A
- Enclosure: DIN 43880 1TE, DIN rail mount
- Terminals: Stranded to 6 mm²
- Housing: Modular design
- Complies with: IEC/EN 61643-21

The IMH-TC series of surge protective devices has been developed to protect against the effects of induced voltages onto data, signal and communication circuits.

The circuit used is designed to minimize inter-capacitance, and shunt capacitance, thereby maximizing the operating frequency to 35 MHz in most cases.

The circuit topology consists of a multi-stage protector providing both common (longitudinal) mode and differential

(transverse) mode protection.

Coarse protection is provided by a three terminal gas discharge tube while fine protection is provided using a high speed silicon avalanche diodes or metal oxide varistor stage. Care is taken to ensure coordination between these two stages without voltage or surge current blind spots occurring.

Thermal protection is provided to reduce the hazards of thermal runaway should there be an inadvertent mains incursion fault.

SMH-SG Series

Category IEC/EN:	D1/C1/C2/C3
Mode of protection:	Longitudinal, Transverse
Coarse Protection:	3 terminal GDT
Available voltages:	5, 12, 15, 24, 30, 48, 60, 110VDC
Frequency range:	30MHz
Surge Discharge Ratings:	$I_n: 10\text{kA}, I_{max}: 20\text{kA}, I_{imp}: 2.5\text{kA}$
Series load current:	1A
Enclosure:	DIN 43880 2/3TE, DIN rail mount
Terminals:	Stranded to 4 mm ²
Housing:	Modular design
Complies with:	IEC/EN 61643-21

The SMH-SG series of surge protective devices has been developed to protect against the effects of induced voltages onto data, signal and communication circuits.

It is intended for those applications where high ground potential rises may frequently occur, such as in locations close to electric railways.

The circuit topology consists of a multi-stage protector providing both common (longitudinal) mode and differential (transverse) mode protection.

Coarse protection is provided by a three terminal gas discharge tube while fine protection is provided using a high speed silicon avalanche diodes or metal oxide varistor stage. Care is taken to ensure coordination between these two stages without voltage or surge current blind spots occurring.

Thermal protection is provided to reduce the hazards of thermal runaway should there be an inadvertent mains incursion fault. Both common (longitudinal) mode and differential (transverse) mode protection is provided.

If the module is unplugged out of the base, the connection lines remain enabled.

VMO Series

- Category IEC/EN: D1/C1/C2/C3
- Mode of protection: Longitudinal, Transverse
- Coarse Protection: 2 x 2 terminal GDT
- Available voltages: 5, 12, 15, 24, 30, 48, 60, 110V_{DC}
- Frequency range: 0.6 - 10MHz
- Surge Discharge Ratings: I_n: 20kA, I_{max}: 30kA, I_{imp}: 5kA
- Series load current: 1A
- Enclosure: DIN 43880 1TE, DIN rail mount
- Terminals: Stranded to 6 mm²
- Housing: Modular design
- Complies with: IEC/EN 61643-21

The VMO series of surge protective devices has been developed to protect against the effects of induced voltages onto data, signal and communication circuits.

It is intended for those applications where higher than normal surge discharge levels may be experienced.

Coarse protection is provided by 2 two-terminal gas discharge tubes. A second stage of protection is provided using a three

terminal gas discharge tube which assists in common mode protection.

Fine protection is provided using a high speed silicon avalanche diodes or metal oxide varistor stage. Care is taken to ensure coordination between these two stages without voltage or surge current blind spots occurring.

Both common (longitudinal) mode and differential (transverse) mode protection is provided.

SMH-TDR

Category IEC/EN:	D1/C1/C2/C3
Mode of protection:	Longitudinal, Transverse
Coarse Protection:	3 terminal GDT
Nominal operating voltage:	$U_n: 110\text{VDC}$
Max. operating voltage:	$U_c: 170\text{VDC}$
Serial resistance:	9 - 11Ω
Frequency range:	16MHz
Surge Discharge Ratings:	$I_n: 10\text{kA}$, $I_{max}: 20\text{kA}$, $I_{imp}: 2.5\text{kA}$
Series load current:	300mA
Enclosure:	DIN 43880 2/3TE, DIN rail mount
Terminals:	Stranded to 4 mm ²
Housing:	Modular design

The SMH-TDR has been developed as a generic protector for use on data transmission circuits.

Coarse protection is provided by a three terminal gas discharge tube.

Internal thermal disconnectors are used to reduce the hazards of thermal runaway during fault conditions, or if mains incursion

onto the low voltage data circuit, occurs.

To protect against the hazards of electric shock and fire which often results when power frequency contact occurs between power and communication lines (often called mains incursion), a thermo-clip is included on the primary protection stage to divert the power frequency current to ground.

If the module is unplugged out of the base, the connection lines remain enabled.

VM-TDR

Category IEC/EN:	D1/C1/C2/C3
Mode of protection:	Longitudinal, Transverse
Coarse Protection:	3 terminal GDT
Nominal operating voltage:	$U_n: 110\text{V}_{\text{DC}}$
Max. operating voltage:	$U_c: 170\text{V}_{\text{DC}}$
Serial resistance:	9 - 11Ω
Frequency range:	16MHz
Surge Discharge Ratings:	$I_n: 10\text{kA}$, $I_{\text{max}}: 20\text{kA}$, $I_{\text{imp}}: 2.5\text{kA}$
Series load current:	300mA
Enclosure:	DIN 43880 1TE, DIN rail mount
Terminals:	Stranded to 6 mm ²
Housing:	Modular design

The VM-TDR series has been developed as a generic protector for use on data transmission circuits.

Coarse protection is provided by a three terminal gas discharge tube.

Internal thermal disconnectors are used to reduce the hazards of thermal runaway during fault conditions, or if mains incursion onto the low voltage data circuit, occurs.

Technical data

Type	VM-TDR 110 V
Electrical characteristics	
Number of protected pairs	1 (2 conductors)
Nominal operating voltage (DC)	U_n 110V
Max. continuous operating voltage (DC)	U_c 170V
Rated load current at 25°C	I_L 300mA
Nominal discharge current (8/20μs)	I_n 10kA
Max. discharge current (8/20μs)	I_{max} 20kA
Impulse current (10/350μs)	I_{imp} 2.5kA
Residual voltage at 5kA (8/20μs)	U_{res} < 500V
Rated spark overvoltage	(a/b-PG) 184 - 276V (a-b) 184 - 550V
Response time of overvoltage protection	t_A < 100ns
Thermal protection	YES (thermal disconnection in lines a and b)
Insulation resistance of the protection	R_{iso} ≥ 1GΩ
Serial resistance	R 9-11Ω
Transverse capacitance	C 10pF
Limit frequency	f_G 16MHz
Mechanical characteristics	
Temperature range	- 40°C ... + 80°C
Terminal cross section	Stranded to 6 mm ²
Terminal screw torque	2.0Nm
Degree of protection IEC/EN 60529	IP 20
Housing material	Thermoplastic; yellow, extinguishing degree V-0
Mounting IEC/EN 60715	35mm DIN rail

SMH2-DF Series

Category IEC/EN:	C1/C3
Fine Protection:	Bi-directional TVS diode
Nominal operating voltage:	U_n : 12, 24VDC
Max. operating voltage:	U_c : 15, 28VDC
Frequency range:	up to 1.4MHz
Surge Discharge Ratings:	I_n : 250A, 500A
Series load current:	10A
Enclosure:	DIN 43880 2/3TE, DIN rail mount
Terminals:	Stranded to 4 mm ²
Housing:	Modular design
Complies with:	IEC/EN 61643-21

The SMH2-DF series has been developed to protect data transmission circuits or low voltage alarm circuits such as fire or security.

They only provide fine protection using a high speed, bi-directional, silicon stage.

Where necessary, the SMH2-DF may be used with a higher energy coarse protection unit such as the SMH2-TDR series.

The plug-in module/base design facilitates replacement of a failure module without the need to remove system wiring.

If the module is unplugged out of the base, the connection lines remain enabled.

Technical data

Type	SMH2-DF	
	12V	24V
Electrical characteristics		
Number of protected pairs	2 (4 conductors)	
Nominal operating voltage (DC)	U_n	12V
Max. continuous operating voltage (DC)	U_c	24V

IM-VF Series

Category IEC/EN:	C1/C3
Fine Protection:	MOV
Nominal operating voltage:	$U_n: 15, 30\text{VDC}$
Max. operating voltage:	$U_c: 22, 38\text{VDC}$
Frequency range:	0.5MHz
Surge Discharge Ratings:	$I_n: 500\text{A}$
Series load current:	10A
Enclosure:	DIN 43880 1/3TE, DIN rail mount
Terminals:	Stranded to 4 mm ²
Housing:	Compact design
Complies with:	IEC/EN 61643-21

The IM-VF series has been developed to protect data transmission circuits or low voltage alarm circuits such as fire or security.

They only provide fine protection using a MOV.

Where necessary, the IM-VF may be used with a higher energy coarse protection unit such as the VM-TDR series.

SMH-20 Series

- Category IEC/EN: D1/C1/C2/C3
- Coarse Protection: 3 terminal GDT
- Nominal operating voltage: U_n : 230, 24, 60V_{DC}
- Max. operating voltage: U_c : 320, 28, 64V_{DC}
- Frequency range: 1.4 - 10MHz
- Surge Discharge Ratings: I_n : 10kA, I_{max} : 20kA, I_{imp} : 2.5kA
- Series load current: 145mA (5A for 230V version)
- Safety: PTC $I > 0.3A$ (24 and 60V versions)
- Enclosure: DIN 43880 2/3TE, DIN rail mount
- Terminals: Stranded to 4 mm²
- Housing: Modular design
- Complies with: IEC/EN 61643-21

The SMH-20 series of low voltage protective devices has been developed as a generic protector for low voltage application and provides both common (longitudinal) mode and differential (transverse) mode protection.

Coarse protection is provided using a three terminal gas

discharge tube while fine protection is provided using a high speed silicon or metal oxide varistor stage.

Overcurrent protection is provided using a PTC element, which provides a level of protection against short circuit fault conditions.

If the module is unplugged out of the base, the connection lines remain enabled.

SMH-TC+PS

Category IEC/EN:	D1/C1/C2/C3
Mode of protection:	Longitudinal, Transverse
Coarse protection:	3 terminal GDT (data line), MOVs (PS line)
Available voltages:	24VDC
Frequency range:	30MHz
Surge Discharge Ratings:	$I_n: 10\text{kA}$, $I_{max}: 20\text{kA}$, $I_{imp}: 2.5\text{kA}$
Series load current:	1A (data line), 3A (PS line)
Enclosure:	DIN 43880 2/3TE, DIN rail mount
Terminals:	Stranded to 4 mm ²
Housing:	Modular design
Complies with:	IEC/EN 61643-21

The SMH-TC+PS has been developed for protection of systems with 1 supplying and one signal line (CAN bus, DeviceNet,...).

This efficient overvoltage protective device is intended to protect line from overvoltage surges and electrostatic discharges

created by switching transients in buildings.

The signal line circuit is designed to minimize intercapacitance, and shunt capacitance, thereby maximizing the operating frequency to 30MHz.

If the module is unplugged out of the base, the connection lines remain enabled.

LZ-SMH Series

Category IEC/EN:	D1/C1/C2/C3
Mode of protection:	Longitudinal, Transverse
Coarse protection:	3 terminal GDT
Available voltages:	12, 24V, 110Vdc
Frequency range:	30MHz
Surge Discharge Ratings:	$I_n: 10\text{kA}, I_{max}: 20\text{kA}, I_{imp}: 2.5\text{kA}$
Series load current:	1A
Terminals:	Stranded to 1.5 mm ²
Design:	PCB assembly
Complies with:	IEC/EN 61643-21

These efficient overvoltage barriers contain both coarse and fine protection stages and provide longitudinal and a transverse surge protection.

The initial protection stage comprises a three-pole gas discharge tube and is designed to divert the primary surge energy. The subsequent fine protection stage is carried out using fast bi-directional silicon avalanche diodes. Care is taken in the

design of this fine protection stage to avoid capacitive line loading and thereby ensuring a low insertion loss and wide operating frequency range.

Series line impedances ensure energy co-ordination between the coarse and a fine protection stages at all levels of the incident surge. To protect against the hazards of electric shock and fire which often results when power frequency contact occurs between power and communication lines (often called mains incursion), a thermo-clip is included on the primary protection stage to divert the power frequency current to the ground.

Min. packaging quantity	30 pcs.		

Notes

Modular SPD for xDSL Technologies

Category IEC / EN:	D1/C1/C2/C3
Location of use:	xDSL transmission
Protective elements:	MOV, GDT, thyristor
Available voltages:	120VDC
Surge discharge ratings:	$I_n = 10\text{kA}$, $I_{max} = 20\text{kA}$, $I_{imp} = 2.5\text{kA}$
Complies with:	IEC/EN 61643-21

IM-xDSL-X

IM-xDSL series products were designed to protect ADSL and VDSL transmissions. It can be also used to protect POTS, ISDN, SHDSL and HDSL protocols.

Products are available in three different versions offering different protection level and frequency range.

IM-xDSL Series

Category IEC/EN:	D1/C1/C2/C3
Coarse Protection:	3 terminal GDT
Nominal operating voltage:	$U_n: 120\text{V}_{\text{DC}}$
Max. operating voltage:	$U_c: 170\text{V}_{\text{DC}}$
Frequency range:	14 - 22MHz
Surge Discharge Ratings:	$I_n: 10\text{kA}$, $I_{\text{max}}: 20\text{kA}$, $I_{\text{imp}}: 2.5\text{kA}$
Series elements typical:	0.3Ω/50μH
Enclosure:	DIN 43880 1TE, DIN rail mount
Terminals:	Stranded to 6 mm ²
Housing:	Modular design
Complies with:	IEC/EN 61643-21

The IM-xDSL series has been developed to protect ADSL and VDSL class I transmission. It can also be used to protect ISDN, SDSL and HDSL protocol.

Coarse protection is provided by a three terminal gas discharge tube which provides symmetrical common

(longitudinal) mode protection from each line to protective ground.

In more complex versions, a three terminal thyristor protection or varistor provides fine differential (transverse) mode protection between lines.

Thermal protection is provided to reduce the hazards of thermal runaway should there be an inadvertent mains incursion fault.

Technical data

Type	IM-xDSL	IM-xDSL-V	IM-xDSL-T
Electrical characteristics			
Number of protected pairs		1 (2 conductors)	
Nominal operating voltage (DC)	U_n	120V	
Max. continuous operating voltage (DC)	U_c	170V	
Rated load current at 25°C	I_L	200mA	
Nominal discharge current (8/20μs)	I_n	10kA	
Max. discharge current (8/20μs)	I_{max}	20kA	
Impulse current (10/350μs)	I_{imp}	2.5kA	
Residual voltage at 5 kA (8/20μs)	U_{res}	< 700V	< 500V
Rated spark overvoltage	(a/b-PG) (a-b)	184 - 276V 184 - 550V	184 - 276V 184 - 260V
Response time of overvoltage protection	t_A	< 100ns	< 25ns
Thermal protection		YES	< 1ns
Insulation resistance of the protection	R_{iso}	170MΩ	
Serial resistance	R	approx. 0.3Ω	
Serial inductance	L	approx. 50μH	
Inductance in the loop		< 0.5μH	
Limit frequency (- 3dB, $Z_K = 120\Omega$)	f_G	> 22MHz	> 14MHz
Mechanical characteristics			
Temperature range		- 25°C ... + 60°C	
Terminal cross section		Stranded to 6 mm ²	
Terminal screw torque		2.0Nm	
Degree of protection IEC/EN 60529		IP 20	
Housing material		Thermoplastic; yellow, extinguishing degree V-0	
Mounting IEC/EN 60715		35mm DIN rail

Notes

Modular SPD for Explosive Environments (Ex)

Category IEC / EN:	C1/C2/C3
Location of use:	Hazardous areas
Protective elements:	GDT, diode
Available voltages:	15, 30VDC
Surge discharge ratings:	$I_n = 10\text{kA}$, $I_{max} = 20\text{kA}$
Complies with:	IEC/EN 61643-21 II 1 G Ex ia IIC T4 Ga Baseefa 04 ATEX 0209X

IM-xxEx

The IM-Ex series is intended to provide protection to low voltage signal and data circuits located in potentially explosive environments.

It is intended for use on inherently safe circuits in accordance with ATEX directive. The protection module should be located as close to the end-user equipment being protected, as possible.

IM-Ex Series

Category IEC/EN:	C1/C2/C3
Mode of protection:	Longitudinal, Transverse
Coarse Protection:	3 terminal GDT
Nominal operating voltage:	U_n : 15, 30VDC
Max. operating voltage:	U_c : 18, 33VDC
Frequency range:	3MHz
Serial Resistance:	0.1 - 0.4Ω per line
Surge Discharge Ratings:	I_n : 10kA, I_{max} : 20kA
Series load current:	500mA
Enclosure:	DIN 43880 1TE, DIN rail mount
Terminals:	Stranded to 6 mm ²
Housing:	Modular design
Complies with:	IEC/EN 61643-21

The IM-Ex series is intended to provide protection to low voltage signal and data circuits located in potentially explosive environments.

It is intended for use on inherently safe circuits in accordance with ATEX directive. The protection module should be located as close to the end-user equipment being protected, as possible.

The circuit consists of a multi-stage protector providing both common (longitudinal) mode and differential (transverse) mode protection.

Coarse protection is provided using a three terminal gas discharge tube while fine protection is provided using a high speed bi-directional silicon stage. Care is taken to ensure coordination between these two stages without voltage or surge current blind spots occurring.

Modular and Compact SPD for DC Power Systems

Category IEC / EN / VDE:

Class I, II, III / Type 1, 2, 3 / B, C, D (IEC/EN 61643-11)

Category IEC / EN:

D1/C1/C2/C3 (IEC/EN 61643-21)

Location of use:

Sub-distribution boards, DC power systems

Protective elements:

MOV, GDT, diode

Surge discharge ratings:

I_{max} up to 60kA, I_{imp} up to 10kA

Internal protection and safety:

Separate thermal disconnector for each MOV

Complies with:

IEC/EN 61643-11, 61643-21

DC PROTEC B(R) 10/xx

DC PROTEC C(R) 40/xx

PROTEC C(R) 40/75

PROTEC CN(R) 40/75

PROTEC DMDR 20/xxx

VM-DC xx

SMH-PS xx

SPDs for DC power systems have been designed to meet the unique requirements of protection used for telecommunication and railway applications. It provides both, common and differential protection modes. Internal thermal disconnectors are used to eliminate the hazard of thermal runaway fault conditions.

DC PROTEC B(R) 10 Series

Category IEC/EN/VDE:	Class I / Type 1 / B
Location of use:	Sub-distribution boards
Protection modes:	(+) → PE, (-) → PE, (+) → (-)
Protective element:	MOV
Surge discharge rating:	$I_n: 20\text{kA}$, $I_{max}: 60\text{kA}$, $I_{imp}: 10\text{kA}$
Enclosure:	DIN 43880 4TE, DIN rail mount
Terminals:	Solid 35 mm ² /stranded 25 mm ²
Housing:	Compact design
Complies with:	IEC/EN 61643-11

The DC PROTEC B series has been designed to meet the unique requirements of protection of DC power systems found in telepower and railway applications.

DC PROTEC B provides both common and differential mode protection using high nominal discharge rating for extended operating life under DC conditions.

VM-DC Series

- Category IEC/EN: D1/C1/C2/C3
- Coarse Protection: 3 terminal GDT
- Location of use: DC power systems
- Nominal operating voltage: U_n : 12 and 24VDC
- Max. operating voltage: U_c : 15 and 28VDC
- Surge Discharge Ratings: I_n : 10kA, I_{max} : 20kA, I_{imp} : 2.5kA
- Serial resistance: 0.1Ω
- Enclosure: DIN 43880 1TE, DIN rail mount
- Terminals: Stranded to 6 mm²
- Housing: Modular design
- Complies with: IEC/EN 61643-21

The VM-DC series has been developed to protect DC power supplies.

Coarse protection is provided by a three terminal gas discharge tube while fine protection is provided using a high speed silicon stage.

Technical data

Type	VM-DC xx	
	12V	24V
Electrical characteristics		
Number of protected pairs	1 (2 conductors)	
Nominal operating voltage (DC) U_n	12VDC	24VDC
Max. continuous operating voltage (DC) U_c	15VDC	28VDC
Rated operating current at 25°C I_L	10A	
Nominal discharge current (8/20μs) I_n	10kA

SMH-PS Series

Category IEC/EN:	C1/C2/C3
Coarse Protection:	MOVs
Location of use:	DC power systems
Nominal operating voltage:	U_n : 12, 24 and 48V _{DC}
Max. operating voltage:	U_c : 15, 18 and 52V _{DC}
Surge Discharge Ratings:	I_n : 10kA, I_{max} : 20kA
Serial inductivity:	10 - 14μH
Series load current:	4A
Enclosure:	DIN 43880 2/3TE, DIN rail mount
Terminals:	Stranded to 4 mm ²
Housing:	Modular design
Complies with:	IEC/EN 61643-21

The SMH-PS series has been developed to protect power supplies.

Coarse protection is provided by varistors while fine protection is provided using a high speed silicon stage.

Internal thermal disconnectors are used to reduce the hazards of thermal runaway during fault conditions, or if mains incursion onto the low voltage data circuit, occurs.

If the module is unplugged out of the base, the connection lines remain enabled.

Notes

SPD for Local Area Networks (LAN)

Category IEC / EN / VDE:	Class III / Type 3 / D (IEC/EN 61643-11)
Category IEC / EN:	D1/C1/C2/C3 (IEC/EN 61643-21)
Location of use:	Local area networks (LAN)
Protective elements:	GDT, diode
Surge discharge ratings:	I _n up to 10kA
Frequency:	up to 250MHz, Cat 6 capable
Complies with:	IEC/EN 61643-11, IEC/EN 61643-21

LZ-NET 6
LZ-NET-xxx
LZ-24NET xx
ZE 200 NET

The NET series is intended to protect Local Area Networks (LAN) from overvoltage surges and electrostatic discharges created by switching transients in buildings. LAN systems are particularly prone to such disturbances because of long cable lengths.

LZ-NET series is designed to protect Cat 5 Local Area Networks. There are available in standard, PoE and STP versions.

LZ-NET 6 is designed to protect Cat 6 Local Area Networks. It is suitable for protection of 1Gbit/s lines and fully compatible with current PoE standards.

LZ-xxNET 19 series is designed to protect Cat 5 Local Area Networks. It is available in 8, 16 and 24 line versions.

ZE 200-NET is combined protective device designed to protect Cat 5 Local Area Networks as well as the AC power port.

LZ-NET 6

Category IEC / EN:	D1/C1/C2/C3
Protection:	All 4 pairs protected
Nominal operating voltage:	U_n : 48V _{DC}
Max. operating voltage:	U_c : 50V _{DC}
Frequency range:	250MHz, up to Cat 6, PoE compatible
Surge Discharge Ratings:	I_n : 10kA, I_{imp} : 1kA
Enclosure:	UTB in-line patch, DIN rail mount
Housing:	Compact design
Termination:	RJ45, shielded
Complies with:	IEC/EN 61643-21

The LZ-NET 6 series is intended to protect Local Area Networks (LAN) from overvoltage surges and electrostatic discharges created by switching transients in buildings. LAN systems are particularly prone to such disturbances because of the often long cable lengths involved which behave like antennas to such atmospheric disturbances.

It provides protection to all 4 lines in the UTP, STP and is **Cat 6 capable**.

Ground potential equalization between signal and protective (network or PC chassis) ground is provided.

Product is designed to fulfil all versions of PoE applications compatible with standards IEEE 802.3af and IEEE 802.3at.

Technical data

Type	LZ-NET 6

LZ-xx NET 19 Series

- **Category IEC / EN:** C1/C2/C3 (see Technical data)
- **Protection:** All 4 pairs protected
- **Nominal operating voltage:** U_n : 5, 48VDC
- **Max. operating voltage:** U_c : 6, 58VDC
- **Frequency range:** < 100MHz, Cat 5 capable
- **Surge Discharge Rating:** I_n up to 300A per line
- **Enclosure:** 19" rack, shielded, in-line patch
- **Termination:** RJ45, Cat 5 connectors
- **Options:** 8, 16, 24 ports; replaceable 8 ports module
- **Complies with:** IEC/EN 61643-21

The LZ-NET 19 series is intended to protect Local Area Networks (LAN) from overvoltage surges and electrostatic discharges created by switching transients in buildings. LAN systems are particularly prone to such disturbances because of the often long cable lengths involved which behave like antennas

to such atmospheric disturbances.

It is designed to fit a 19" rack mount and can provide 8, 16 or 24 ports patching to UTP lines.

PoE version (LZ-xx NET 19 PoE) is designed to fulfil all versions of PoE applications compatible with standards IEEE 802.3af and IEEE 802.3at.

Notes

SPD for Data Protocols

Category IEC / EN:	D1/C1/C2/C3
Location of use:	Data transmission circuits, RS 485, RS 422, RS 232 and V11 and X.12 protocol
Protective elements:	MOV, GDT, diode
Surge discharge ratings:	I _n up to 20kA
Frequency:	up to 35MHz
Complies with:	IEC/EN 61643-21

VM-RS 485

Data protocol SPDs were developed to protect different types of standard protocols.

IM-DB 9

WM-RS 485 has been designed to protect all versions of RS 485. It can be used for protection of RS 422 and V.11 protocol as well.

IM-DB 15 RS

IM-DB has been designed to protect less exposed transmission circuits using the RS 232 protocol.

IM-DB 15 series has been designed to protect data transmission circuits using the RS 422, V.11 and X.12 protocols.

VM-RS 485

Category IEC / EN:	D1/C1/C2/C3
Mode of protection:	Longitudinal, Transverse
Coarse Protection:	2 x 3 terminal GDT, 2 x 2 terminal GDT
Nominal operating voltage:	$U_n: 5\text{VDC}$
Max. operating voltage:	$U_c: 6\text{VDC}$
Serial resistance:	1.7 - 1.9Ω per line
Frequency range:	< 1MHz
Surge Discharge Ratings:	$I_{n}: 20\text{kA}; I_{imp}: 2.5\text{kA}$
Series load current:	500mA
Enclosure:	DIN 43880 2TE, DIN rail mount
Terminals:	Stranded 2 x 2.5mm ²
Housing:	16 terminal compact design
Complies with:	IEC/EN 61643-21

The VM-RS series has been developed to protect 2 pair data transmission circuits using the RS 485, RS 422 and V.11 protocol.

The circuit consists of two balanced pairs with equipotential equalization between them. Equipotential equalization is also provided between signal ground and protective ground to avoid equipment damage from ground potential rises during surge activity.

Coarse protection is provided by a three terminal gas

discharge tube while fine protection is provided using a high speed silicon stage which provides both common (longitudinal) mode protection from each line to protective ground, and differential (transverse) mode protection between each pair.

Care is taken to ensure coordination between these two stages without voltage or surge current blind spots occurring.

Thermal protection is provided to reduce the hazards of thermal runaway should there be an inadvertent mains incursion fault.

Complies with:

IEC/EN 61643-21

PLP

The PLP-24V surge protective device is intended for the protection of data circuits such as 4-20mA current loops, in industrial environments.

IM-GD

The IM-GD series is intended as a generic protector for data circuits.

IM-NF xx

The IM-NF series is designed as a hybrid, PCB mount, protector against the effects of induced voltages onto data, signal and communication circuits.

PLP-24V

Category IEC / EN:	C1/C2/C3
Mode of protection:	Longitudinal, Transverse
Coarse Protection:	3 terminal GDT
Nominal operating voltage:	U_n : 24VDC
Max. operating voltage:	U_c : 28VDC
Frequency range:	3.0MHz
Surge Discharge Ratings:	I_n : 10kA, I_{max} : 20kA
Serial Resistance:	< 5 Ω per line
Series load current:	145mA
Enclosure:	¾" stainless steel fitting conduit
Terminals:	Stranded 2.5 mm ²
Housing:	in-line, ¾" conduit fitting
Complies with:	IEC/EN 61643-21

The PLP-24V surge protective device is intended for the protection of data circuits such as 4-20mA current loops, in industrial environments.

The ¾-inch pipe fitting makes this device ideal for applications such as the protection of field mount sensors, transducers and RTUs. The unit can be configured in-line with the cable with the cable conduit and sensor terminals, or in a "T" configuration.

The circuit consists of a multi-stage protector providing both

common (longitudinal) mode and differential (transverse) mode protection.

Coarse protection is provided by a three terminal gas discharge tube while fine protection is provided using a high speed silicon avalanche diode or metal oxide varistor stage. Care is taken to ensure coordination between these two stages without voltage or surge current blind spots occurring.

Thermal protection is provided to reduce the hazards of thermal runaway should there be an inadvertent mains incursion fault.

Technical data

Type	PLP-24V

IM-NF Series

- Category IEC / EN: C1/C2/C3
- Mode of protection: Transverse
- Nominal operating voltage: U_n : 5, 15, 24VDC
- Max. operating voltage: U_c : 6, 18, 28VDC
- Frequency range: < 0.6 - 1.4MHz
- Surge Discharge Ratings: I_n : 5kA, I_{max} : 10kA
- Series Elements typical: 18Ω / 47μH
- Series load current: 145mA
- Enclosure: PCB hybrid
- Terminals: PCB pins
- Housing: PCB module
- Complies with: IEC/EN 61643-21

The IM-NF series is designed as a PCB mount hybrid protector against the effects of induced voltages onto data, signal and communication circuits. It is used as a component in their final product assembly.

It consists of a multi-stage protector with coarse protection being provided by a two terminal gas discharge tube while fine protection is provided using a high speed silicon stage. Care is

taken to ensure coordination between these two stages without voltage or surge current blind spots occurring.

Overshoot protection is provided by a PTC element, which provides a level of protection against short circuit or mains incursion. Internal thermal disconnectors are also employed to reduce the hazards of thermal runaway during fault conditions.

An inline inductor is incorporated and can be used to achieve better coordination with other on-board protection components.

CCPxxx-TV
CCP-L/4-7/16
CCP-L/4-N

Coaxial protection devices are intended to protect TV sets, aerial amplifiers, CCTV/CATV systems as well as RF antenna systems and are suitable to frequencies up to 6GHz.

The careful design, low capacitance gas discharge arresters and high quality termination connectors, ensures a minimum of insertion loss throughout the frequency band.

ZV-BNC Series

Category IEC / EN:	C1/C2/C3
Design:	Impedance matched
Nominal operating voltage:	$U_n: 10, 24\text{VDC}$
Max. operating voltage:	$U_c: 12, 28\text{VDC}$
Frequency range:	< 100MHz
Surge Discharge Ratings:	$I_n: 10\text{kA}, I_{max}: 20\text{kA}$
Series load current:	100mA
Housing:	Shielded enclosure, in-line installation
Termination:	BNC connectors
Complies with:	IEC/EN 61643-21

The ZV-BNC series is intended to protect Arcnet computer networks and CCTV coaxial video signals.

Both coarse and fine protection is provided in a shielded, impedance matched, compact in-line enclosure.

Protection is provided core-shield, and shield-protective ground.

The design ensures minimum of capacitance loading thereby ensuring a high operating bandwidth while providing efficient clamping against transient voltages.

ZV1, ZV1-F

Category IEC/EN:	C1/C2/C3
Design:	In-line, impedance matched
Nominal operating voltage:	U_n : 48V _{DC}
Max. operating voltage:	U_c : 60V _{DC}
Frequency range:	40 - 860MHz
Surge Discharge Ratings:	I_n : 5kA, I_{max} : 10kA
Series load current:	100mA
Housing:	Shielded enclosure, in-line installation
Termination:	IEC TV or F connectors
Complies with:	IEC/EN 61643-21

The aerial adapters ZV1 (ZV1-F) are intended for the protection of TV sets, aerial amplifiers and cable television CATV.

It should be connected to the aerial input of the TV set, with the coaxial cable from the aerial plugged into the other side. It should be grounded to the protective earth conductor of the housing installation.

In the case of an individual aerial system with an individual aerial amplifier it is recommended to install an additional aerial adapter which should be connected in the same way as for the TV set.

The aerial adapter is not suitable for outdoor installation or installation in very damp places.

CCP-BNC Series

Category IEC/EN:	C1/C2/C3
Design:	In-line, impedance matched
Max. operating voltage:	U_c : 70, 180, 280V
Max. Peak Power:	40, 125, 300W
Frequency range:	DC - 2.6GHz
Surge Discharge Ratings:	I_n : 10kA, I_{max} : 20kA
Characteristic Impedance:	50Ω
Insertion loss:	< 0.4dB
Return loss:	> 20dB
Housing:	Shielded enclosure, in-line installation
Termination:	BNC type, M-F and F-F available
Complies with:	IEC/EN 61643-21

The CCP-BNC series of coaxial surge protectors is intended to protect RF antenna systems and is suitable for frequencies from DC to 2.6 GHz.

It is designed as an in-line unit allowing ease of installation. The careful design, low capacitance gas discharge arresters and high quality BNC-type termination connectors, ensures a minimum of insertion loss throughout the frequency band.

Transfer power is 40W to 300W continuous (depending on CCP voltage).

The CCP coaxial cable protector is designed in accordance with the following standards and regulations:

- IEC 61643-21:2009

A grounding stud is provided which should be connected to the system ground, or coaxial feed-through bulkhead, as directly as possible.

Return loss:	> 20dB
Housing:	Shielded enclosure, bulkhead installation
Termination:	7/16 type, M-F
Complies with:	IEC/EN 61643-21

The CCP-7/16 series of coaxial surge protectors is intended to protect base station RF antenna systems and is suitable for frequencies from DC to 2.5GHz.

It is designed for bulkhead or in-line installation. The careful design, low capacitance gas discharge arresters and high quality 7/16-type termination connectors ensure a minimum of insertion loss throughout the frequency band.

Transfer power is 40W to 300W continuous (depending on

CCP voltage).

The CCP coaxial cable protector is designed in accordance with the following standards and regulations:

- IEC 61643-21:2009

GDT is replaceable. The unit should be solidly mounted to the coaxial feed-through bulkhead which should in turn present a low impedance path to ground for direct or partial lightning currents.

CCP-TNC-6G

Category IEC/EN:	C1/C2/C3
Design:	In-line, impedance matched
Max. operating voltage:	U_c : 180V
Max. Peak Power:	125W
Frequency range:	DC - 6.0GHz
Surge Discharge Ratings:	I_n : 10kA, I_{max} : 20kA
Characteristic Impedance:	50Ω
Insertion loss:	< 0.4dB
Return loss:	> 20dB
Housing:	Shielded enclosure, in-line installation
Termination:	TNC type, M-F and F-F available
Complies with:	IEC/EN 61643-21

The CCP-TNC-6G series of coaxial surge protectors is intended to protect RF antenna systems and is suitable for frequencies from DC to **6.0GHz**.

It is designed as an in-line unit allowing ease of installation. The careful design, low capacitance gas discharge arresters and high quality TNC-type termination connectors, ensures a minimum of insertion loss throughout the frequency band.

Transfer power is 125W continuous.

The CCP coaxial cable protector is designed in accordance with the following standards and regulations:

- IEC61643-21:2009

A grounding stud is provided which should be connected to the system ground, or coaxial feed-through bulkhead, as directly as possible.

CCP-UHF Series

Category IEC/EN:	C1/C2/C3
Design:	In-line, impedance matched
Max. operating voltage:	U_c : 70, 180, 280V
Max. Peak Power:	40, 125, 300W
Frequency range:	DC - 600MHz
Surge Discharge Ratings:	I_n : 10kA, I_{max} : 20kA
Characteristic Impedance:	50Ω
Insertion loss:	< 0.4dB
Return loss:	> 20dB
Housing:	Shielded enclosure, in-line installation
Termination:	UHF type, M-F and F-F available
Complies with:	IEC/EN 61643-21

The CCP-UHF series of coaxial surge protectors is intended to protect RF antenna systems and is suitable for frequencies from DC to 600 MHz.

It is designed as an in-line unit allowing ease of installation. The careful design, low capacitance gas discharge arresters and high quality UHF-type termination connectors, ensures a minimum of insertion loss throughout the frequency band.

Transfer power is 40W to 300W continuous (depending on CCP voltage).

The CCP coaxial cable protector is designed in accordance with the following standards and regulations:

- IEC 61643-21:2009

A grounding stud is provided which should be connected to the system ground, or coaxial feed-through bulkhead, as directly as possible.

CCP-F Series

Category IEC/EN:	C1/C2/C3
Design:	In-line, impedance matched
Max. operating voltage:	U_c : 70, 180V
Max. Peak Power:	40, 125W
Frequency range:	DC - 2.0GHz
Surge Discharge Ratings:	I_n : 10kA, I_{max} : 20kA
Characteristic Impedance:	75Ω
Insertion loss:	< 0.4dB
Return loss:	> 20dB
Housing:	Shielded enclosure, in-line installation
Termination:	F type, M-F and F-F available
Complies with:	IEC/EN 61643-21

The CCP-F series of coaxial surge protectors is intended to protect RF antenna systems terminating in F-type connectors and is suitable for frequencies from DC to 2.0GHz. It is eminently suitable for the protection of USA CCTV and CATV systems.

It is designed as an in-line unit allowing ease of installation. The careful design, low capacitance gas discharge arresters and high quality F-type termination connectors, ensures a minimum of insertion loss throughout the frequency band.

Transfer power is 40W to 125W continuous (depending on CCP voltage).

The CCP coaxial cable protector is designed in accordance with the following standards and regulations:

- IEC61643-21:2009

A grounding stud is provided which should be connected to the system ground, or coaxial feed-through bulkhead, as directly as possible.

Combined Plug-in SPD

Category IEC / EN / VDE:

Class III / Type 3 / D (IEC/EN 61643-11)

Category IEC / EN:

C1/C2/C3 (IEC/EN 61643-21)

Location of use:

Multimedia devices

Complies with:

IEC/EN 61643-11, IEC/EN 61643-21

ZES-76 TEL-TV

Combined plug-in surge protective devices are designed for protection of multimedia devices (e.g. printers, modems, TV sets, Hi-fi's, DVDs etc.) The protection is functionally divided into power supply protection (230V), telephone line protection, LAN protection and TV protection.

ZES-7 TEL-TV

ZES-76 is equipped with 1 protected power socket, telephone line protection and TV protection.

ZES 1M+5S

ZES-7 TEL-TV is equipped with 7 protected power sockets, overload protection, telephone line protection and TV protection.

ZES 1M+4S TEL-NET USB Hub

ZES 1M+5S is equipped with 6 protected power sockets, overload protection, telephone line protection and TV protection.

ZES 6

ZES 1M+4S TEL-NET USB Hub is equipped with 5 protected power sockets, overload protection, passive USB hub and telephone/LAN Cat 5 protection.

ZES 6 is equipped with 6 protected power sockets and overload protection.

ZES-76 TEL-TV

● Category IEC/EN:	Class III/Type 3/D; /C1/C2/C3
● Protection:	Power, telecommunication and TV
● Nominal operating voltage:	U_n : 230VAC (power side)
● Max. operating voltage:	U_c : 250VAC (power side) U_c : 170VDC (telecomm. side) U_c : 70VDC (TV side)
● Surge Discharge Rating:	U_{oc} : 3kV (power side) I_n : 2.5kA per line (telecomm. side) I_n : 5kA per line (TV side)
● Enclosure:	UTB in-line patch, AC power outlet
● Termination:	DIN 49 440-CEE(7) III, DIN 49 441-CEE(7) IV (power side) RJ11 input / RJ11 output (telecomm. side) IEC connector (TV side)
● Complies with:	IEC/EN 61643-11, 61643-21

The adapter ZES-76 TEL-TV is intended for the protection of multimedia devices (e.g. printers, modems, TV sets, Hi-fi's, DVDs etc). The protection is functionally divided into power supply protection (230V), telephone line protection and TV protection.

Furthermore, there is also an overload protection fitted. The adapter protects electronic devices against surges caused by lightning strikes, switching operations at larger electrical consumers, induction and other sources of overvoltage.

ZES 1M+4S TEL-NET USB Hub

- Category IEC/EN: Class III/Type 3/D; /C1/C2/C3
- Protection: Power, telecommunication / Ethernet Cat 5
- Nominal operating voltage: U_n : 230VAC (power side)
- Max. operating voltage: U_c : 250VAC (power side)
 U_c : 170VDC (data side)
- Surge Discharge Rating: U_{oc} : 3kV (power side)
 I_n : 2.5kA per line (data side)
- Enclosure: UTB in-line patch; 5 AC power outlets
- Termination: DIN 49 440-CEE(7) III, DIN 49 441-CEE(7) IV (power side)
RJ45 input / RJ45 output (data side)
- Complies with: IEC/EN 61643-11, 61643-21

The combined plug-in surge protection ZES-1M+4S is intended for the protection of multimedia devices (e.g. printers, modems, TV sets, Hi-fi's, DVDs etc). The protection is functionally divided into power supply protection (230V) and telephone/Ethernet

Cat 5 protection. Furthermore, there is also an overload protection fitted. The ZES-1M+4S protects electronic devices against surges caused by lightning strikes, switching operations at larger electrical consumers, induction and other sources of overvoltage. 4 port passive USB Hub and master-slave function are included.

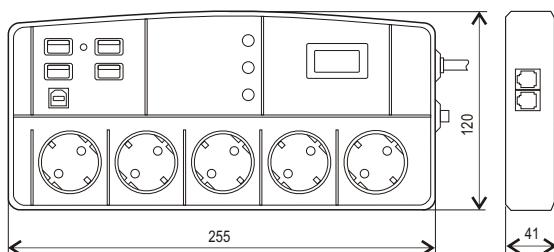

Technical data

Type	ZES 1M+4S TEL-NET USB Hub	
	Power side	Data side
Electrical characteristics		
Number of protected pairs	/	3
Nominal operating voltage	U_n	230VAC / 50Hz
Max. continuous operating voltage	U_c	250VAC / 50Hz
Nominal discharge current (8/20μs)	I_n	/
Open circuit voltage of the combination wave generator	U_{oc}	3kV
Voltage protection level at I_n	U_p	< 1000V (L-N)
Response time of overvoltage protection	t_A	< 25ns
Limit frequency	f_G	/
Back-up fuse	16AGL - (needed if not present in the network)	
Mechanical characteristics		
Connection	DIN 49 440-CE(7) III DIN 49 441-CEE(7) IV; Grounding contact	Input/Output: RJ45 sockets
Temperature range	-40°C ... + 80°C	
Degree of protection IEC/EN 60529	IP 20	
Housing material	Thermoplastic; grey, extinguishing degree V-0	
Indication of disconnector operation	Green and yellow light

ZES 6

Category IEC/EN:	Class III/Type 3/D
Protection:	Power
Nominal operating voltage:	U_n : 230VAC
Max. operating voltage:	U_c : 250VAC
Surge Discharge Rating:	U_{oc} : 3kV
Enclosure:	6 AC power outlets
Termination:	DIN 49 440-CEE(7) III, DIN 49 441-CEE(7) IV
Complies with:	IEC/EN 61643-11

The plug-in surge protection ZES-6 is intended for the protection of household appliances. There is also an overload protection fitted. The ZES-6 protects electronic devices against surges caused by lightning strikes, switching operations at larger electrical consumers, induction and other sources of overvoltage.

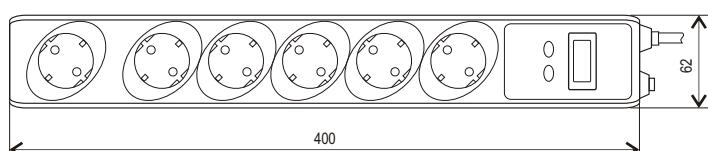

Technical data

Type	ZES 6
Electrical characteristics	
Nominal operating voltage	U_n 230VAC / 50Hz
Max. continuous operating voltage	U_c 250VAC / 50Hz
Open circuit voltage of the combination wave generator	U_{oc} 3kV
Voltage protection level at I_n	U_p < 1000V (L-N)
Response time of overvoltage protection	t_A < 25ns
Limit frequency	f_G /
Mechanical characteristics	
Connection	DIN 49 440-CE(7) III DIN 49 441-CEE(7) IV; Grounding contact
Temperature range	- 40°C ... + 80°C
Degree of protection IEC/EN 60529	IP 20
Housing material	Thermoplastic; grey, extinguishing degree V-0
Indication of disconnector operation	Green and yellow light
