

# BGM11S Blue Gecko *Bluetooth*<sup>®</sup> SiP Module Data Sheet

The BGM11S Blue Gecko *Bluetooth*<sup>®</sup> SiP Module family is targeted for applications where ultra-small size, reliable high performance RF, low-power consumption and easy application development are key requirements.

At 6.5 x 6.5 x 1.4 mm the BGM11S module fits applications where size is a constraint. BGM11S also integrates a high performance, ultra robust antenna, which requires minimal PCB, plastic and metal clearance. The total PCB area required by BGM11S is only 51 mm<sup>2</sup>. The BGM11S has Bluetooth, CE, full FCC, ISED Canada, Japan, South-Korea, and Taiwan certifications.

Based on EFR32BG1 SoC, the BGM11S also integrates a *Bluetooth* 4.2 compliant Bluetooth Low Energy and it can also run end-user applications on-board or alternatively used as a network co-processor over one of the host interfaces.

BGM11S SiP modules can be used in a wide variety of applications:

- Wearables
- IoT end devices and gateways
- Health, sports and wellness devices
- Industrial, home and building automation
- Smart phone, tablet and PC accessories
- Beacons

## KEY FEATURES

- Bluetooth 4.2 low energy compliant
- Integrated antenna or RF pin
- TX power up to +8 dBm
- RX sensitivity: -90 dBm
- Range: up to 200 meters
- 32-bit ARM<sup>®</sup> Cortex<sup>®</sup>-M4 core at 38.4 MHz
- Flash memory: 256 kB
- RAM: 32 kB
- Autonomous Hardware Crypto Accelerator and Random Number Generator
- Integrated DC-DC Converter
- Onboard Bluetooth stack

## 1. Feature List

The BGM11S highlighted features are listed below.

- **Low Power Wireless System-on-Chip.**
  - High Performance 32-bit 38.4 MHz ARM Cortex<sup>®</sup>-M4 with DSP instruction and floating-point unit for efficient signal processing
  - 256 kB flash program memory
  - 32 kB RAM data memory
  - 2.4 GHz radio operation
  - TX power up to +8 dBm
- **Low Energy Consumption**
  - 8.7 mA RX current at 2.4 GHz
  - 8.2 mA TX current @ 0 dBm output power at 2.4 GHz
  - 63  $\mu$ A/MHz in Active Mode (EM0)
  - 2.5  $\mu$ A EM2 DeepSleep current (full RAM retention and RTCC running from LFXO)
  - 2.1  $\mu$ A EM3 Stop current (State/RAM retention)
- **High Receiver Performance**
  - -90 dBm sensitivity @ 1 Mbit/s GFSK (2.4 GHz)
- **Supported Protocols**
  - Bluetooth<sup>®</sup> Low Energy
- **Support for Internet Security**
  - General Purpose CRC
  - Random Number Generator
  - Hardware Cryptographic Acceleration for AES 128/256, SHA-1, SHA-2 (SHA-224 and SHA-256) and ECC
- **Wide Selection of MCU peripherals**
  - 12-bit 1 Msps SAR Analog to Digital Converter (ADC)
  - 2  $\times$  Analog Comparator (ACMP)
  - Digital to Analog Current Converter (IDAC)
  - 32 pins connected to analog channels (APORT) shared between Analog Comparators, ADC, and IDAC
  - 30 General Purpose I/O pins with output state retention and asynchronous interrupts
  - 8 Channel DMA Controller
  - 12 Channel Peripheral Reflex System (PRS)
  - 2 $\times$ 16-bit Timer/Counter
    - 3 + 4 Compare/Capture/PWM channels
  - 32-bit Real Time Counter and Calendar
  - 16-bit Low Energy Timer for waveform generation
  - 32-bit Ultra Low Energy Timer/Counter for periodic wake-up from any Energy Mode
  - 16-bit Pulse Counter with asynchronous operation
  - Watchdog Timer with dedicated RC oscillator @ 50 nA
  - 2 $\times$ Universal Synchronous/Asynchronous Receiver/Transmitter (UART/SPI/SmartCard (ISO 7816)/IrDA/I<sup>2</sup>S)
  - Low Energy UART (LEUART<sup>™</sup>)
  - I<sup>2</sup>C interface with SMBus support and address recognition in EM3 Stop
- **Wide Operating Range**
  - 1.85 V to 3.8 V single power supply
  - 2.4 V to 3.8 V when using DC-DC
  - Integrated DC-DC
  - -40 °C to +85 °C
- **Dimensions**
  - 6.5 x 6.5 x 1.4 mm

### 3. System Overview

#### 3.1 Introduction

The BGM11S product family combines an energy-friendly MCU with a highly integrated radio transceiver. The devices are well suited for any battery operated application, as well as other system requiring high performance and low-energy consumption. This section gives a short introduction to the full radio and MCU system. A detailed functional description can be found in the *EFR32BG1 Wireless Gecko Bluetooth® Low Energy SoC Family Data Sheet* (see general sections and QFN48 2.4 GHz SoC related sections).

A detailed block diagram of the EFR32BG SoC is shown in the figure below which is used in the BGM11S Bluetooth Low Energy module.

Figure 3.1. Detailed EFR32BG1 Block Diagram

#### 3.2 Radio

The BGM11S features a radio transceiver supporting Bluetooth® low energy protocol.

##### 3.2.1 Antenna Interface

BGM11S has a built in 2.4GHz ceramic chip antenna or 50 ohm RF pin.

Table 3.1. Antenna Efficiency and Peak Gain

Parameter	With optimal layout	Note
Efficiency	-1 to -2 dB	Efficiency and peak gain depend on the application PCB layout and mechanical design and the used antenna.
Peak gain	1 dBi	

### 3.2.2 RFSENSE

The RFSENSE module generates a system wakeup interrupt upon detection of wideband RF energy at the antenna interface, providing true RF wakeup capabilities from low energy modes including EM2, EM3 and EM4.

RFSENSE triggers on a relatively strong RF signal and is available in the lowest energy modes, allowing exceptionally low energy consumption. RFSENSE does not demodulate or otherwise qualify the received signal, but software may respond to the wakeup event by enabling normal RF reception.

Various strategies for optimizing power consumption and system response time in presence of false alarms may be employed using available timer peripherals.

### 3.2.3 Packet and State Trace

The BGM11S Frame Controller has a packet and state trace unit that provides valuable information during the development phase. It features:

- Non-intrusive trace of transmit data, receive data and state information
- Data observability on a single-pin UART data output, or on a two-pin SPI data output
- Configurable data output bitrate / baudrate
- Multiplexed transmitted data, received data and state / meta information in a single serial data stream

### 3.2.4 Random Number Generator

The Frame Controller (FRC) implements a random number generator that uses entropy gathered from noise in the RF receive chain. The data is suitable for use in cryptographic applications.

Output from the random number generator can be used either directly or as a seed or entropy source for software-based random number generator algorithms such as Fortuna.

### 3.3 Power

The BGM11S has an Energy Management Unit (EMU) and efficient integrated regulators to generate internal supply voltages. Only a single external supply voltage is required, from which all internal voltages are created. An integrated dc-dc buck regulator is utilized to further reduce the current consumption.

Figure 3.2. Power Supply Configuration

#### 3.3.1 Energy Management Unit (EMU)

The Energy Management Unit manages transitions of energy modes in the device. Each energy mode defines which peripherals and features are available and the amount of current the device consumes. The EMU can also be used to turn off the power to unused RAM blocks, and it contains control registers for the dc-dc regulator and the Voltage Monitor (VMON). The VMON is used to monitor multiple supply voltages. It has multiple channels which can be programmed individually by the user to determine if a sensed supply has fallen below a chosen threshold.

#### 3.3.2 DC-DC Converter

The DC-DC buck converter covers a wide range of load currents and provides up to 90% efficiency in energy modes EM0, EM1, EM2 and EM3. Patented RF noise mitigation allows operation of the DC-DC converter without degrading sensitivity of radio components. Protection features include programmable current limiting, short-circuit protection, and dead-time protection. The DC-DC converter may also enter bypass mode when the input voltage is too low for efficient operation. In bypass mode, the DC-DC input supply is internally connected directly to its output through a low resistance switch. Bypass mode also supports in-rush current limiting to prevent input supply voltage droops due to excessive output current transients.

### 3.4 General Purpose Input/Output (GPIO)

BGM11S has up to 30 General Purpose Input/Output pins. Each GPIO pin can be individually configured as either an output or input. More advanced configurations including open-drain, open-source, and glitch-filtering can be configured for each individual GPIO pin. The GPIO pins can be overridden by peripheral connections, like SPI communication. Each peripheral connection can be routed to several GPIO pins on the device. The input value of a GPIO pin can be routed through the Peripheral Reflex System to other peripherals. The GPIO subsystem supports asynchronous external pin interrupts.

## 3.5 Clocking

### 3.5.1 Clock Management Unit (CMU)

The Clock Management Unit controls oscillators and clocks in the BGM11S. Individual enabling and disabling of clocks to all peripheral modules is performed by the CMU. The CMU also controls enabling and configuration of the oscillators. A high degree of flexibility allows software to optimize energy consumption in any specific application by minimizing power dissipation in unused peripherals and oscillators.

### 3.5.2 Internal Oscillators

The BGM11S fully integrates two crystal oscillators and four RC oscillators, listed below.

- A 38.4MHz high frequency crystal oscillator (HFXO) provides a precise timing reference for the MCU and radio.
- A 32.768 kHz crystal oscillator (LFXO) provides an accurate timing reference for low energy modes.
- An integrated high frequency RC oscillator (HFRCO) is available for the MCU system, when crystal accuracy is not required. The HFRCO employs fast startup at minimal energy consumption combined with a wide frequency range.
- An integrated auxiliary high frequency RC oscillator (AUXHFRCO) is available for timing the general-purpose ADC and the Serial Wire debug port with a wide frequency range.
- An integrated low frequency 32.768 kHz RC oscillator (LFRCO) can be used as a timing reference in low energy modes, when crystal accuracy is not required.
- An integrated ultra-low frequency 1 kHz RC oscillator (ULFRCO) is available to provide a timing reference at the lowest energy consumption in low energy modes.

## 3.6 Counters/Timers and PWM

### 3.6.1 Timer/Counter (TIMER)

TIMER peripherals keep track of timing, count events, generate PWM outputs and trigger timed actions in other peripherals through the PRS system. The core of each TIMER is a 16-bit counter with up to 4 compare/capture channels. Each channel is configurable in one of three modes. In capture mode, the counter state is stored in a buffer at a selected input event. In compare mode, the channel output reflects the comparison of the counter to a programmed threshold value. In PWM mode, the TIMER supports generation of pulse-width modulation (PWM) outputs of arbitrary waveforms defined by the sequence of values written to the compare registers, with optional dead-time insertion available in timer unit TIMER\_0 only.

### 3.6.2 Real Time Counter and Calendar (RTCC)

The Real Time Counter and Calendar (RTCC) is a 32-bit counter providing timekeeping in all energy modes. The RTCC includes a Binary Coded Decimal (BCD) calendar mode for easy time and date keeping. The RTCC can be clocked by any of the on-board oscillators with the exception of the AUXHFRCO, and it is capable of providing system wake-up at user defined instances. When receiving frames, the RTCC value can be used for timestamping. The RTCC includes 128 bytes of general purpose data retention, allowing easy and convenient data storage in all energy modes.

### 3.6.3 Low Energy Timer (LETIMER)

The unique LETIMER is a 16-bit timer that is available in energy mode EM2 Deep Sleep in addition to EM1 Sleep and EM0 Active. This allows it to be used for timing and output generation when most of the device is powered down, allowing simple tasks to be performed while the power consumption of the system is kept at an absolute minimum. The LETIMER can be used to output a variety of waveforms with minimal software intervention. The LETIMER is connected to the Real Time Counter and Calendar (RTCC), and can be configured to start counting on compare matches from the RTCC.

### 3.6.4 Ultra Low Power Wake-up Timer (CRYOTIMER)

The CRYOTIMER is a 32-bit counter that is capable of running in all energy modes. It can be clocked by either the 32.768 kHz crystal oscillator (LFXO), the 32.768 kHz RC oscillator (LFRCO), or the 1 kHz RC oscillator (ULFRCO). It can provide periodic Wakeup events and PRS signals which can be used to wake up peripherals from any energy mode. The CRYOTIMER provides a wide range of interrupt periods, facilitating flexible ultra-low energy operation.

### 3.6.5 Pulse Counter (PCNT)

The Pulse Counter (PCNT) peripheral can be used for counting pulses on a single input or to decode quadrature encoded inputs. The clock for PCNT is selectable from either an external source on pin PCTNn\_S0IN or from an internal timing reference, selectable from among any of the internal oscillators, except the AUXHFRCO. The module may operate in energy mode EM0 Active, EM1 Sleep, EM2 Deep Sleep, and EM3 Stop.

### 3.6.6 Watchdog Timer (WDOG)

The watchdog timer can act both as an independent watchdog or as a watchdog synchronous with the CPU clock. It has windowed monitoring capabilities, and can generate a reset or different interrupts depending on the failure mode of the system. The watchdog can also monitor autonomous systems driven by PRS.

## 3.7 Communications and Other Digital Peripherals

### 3.7.1 Universal Synchronous/Asynchronous Receiver/Transmitter (USART)

The Universal Synchronous/Asynchronous Receiver/Transmitter is a flexible serial I/O module. It supports full duplex asynchronous UART communication with hardware flow control as well as RS-485, SPI, MicroWire and 3-wire. It can also interface with devices supporting:

- ISO7816 SmartCards
- IrDA
- I<sup>2</sup>S

### 3.7.2 Low Energy Universal Asynchronous Receiver/Transmitter (LEUART)

The unique LEUART<sup>™</sup> provides two-way UART communication on a strict power budget. Only a 32.768 kHz clock is needed to allow UART communication up to 9600 baud. The LEUART includes all necessary hardware to make asynchronous serial communication possible with a minimum of software intervention and energy consumption.

### 3.7.3 Inter-Integrated Circuit Interface (I<sup>2</sup>C)

The I<sup>2</sup>C module provides an interface between the MCU and a serial I<sup>2</sup>C bus. It is capable of acting as both a master and a slave and supports multi-master buses. Standard-mode, fast-mode and fast-mode plus speeds are supported, allowing transmission rates from 10 kbit/s up to 1 Mbit/s. Slave arbitration and timeouts are also available, allowing implementation of an SMBus-compliant system. The interface provided to software by the I<sup>2</sup>C module allows precise timing control of the transmission process and highly automated transfers. Automatic recognition of slave addresses is provided in active and low energy modes.

### 3.7.4 Peripheral Reflex System (PRS)

The Peripheral Reflex System provides a communication network between different peripheral modules without software involvement. Peripheral modules producing Reflex signals are called producers. The PRS routes Reflex signals from producers to consumer peripherals which in turn perform actions in response. Edge triggers and other functionality can be applied by the PRS. The PRS allows peripheral to act autonomously without waking the MCU core, saving power.

## 3.8 Security Features

### 3.8.1 GPCRC (General Purpose Cyclic Redundancy Check)

The GPCRC module implements a Cyclic Redundancy Check (CRC) function. It supports both 32-bit and 16-bit polynomials. The supported 32-bit polynomial is 0x04C11DB7 (IEEE 802.3), while the 16-bit polynomial can be programmed to any value, depending on the needs of the application.

### 3.8.2 Crypto Accelerator (CRYPTO)

The Crypto Accelerator is a fast and energy-efficient autonomous hardware encryption and decryption accelerator. It supports AES encryption and decryption with 128- or 256-bit keys and ECC over both GF(P) and GF(2<sup>m</sup>), SHA-1 and SHA-2 (SHA-224 and SHA-256).

Supported modes of operation for AES include: ECB, CTR, CBC, PCBC, CFB, OFB, CBC-MAC, GMAC and CCM.

Supported ECC NIST recommended curves include P-192, P-224, P-256, K-163, K-233, B-163 and B-233.

The CRYPTO is tightly linked to the Radio Buffer Controller (BUFC) enabling fast and efficient autonomous cipher operations on data buffer content. It allows fast processing of GCM (AES), ECC and SHA with little CPU intervention. CRYPTO also provides trigger signals for DMA read and write operations.

## 3.9 Analog

### 3.9.1 Analog Port (APORT)

The Analog Port (APORT) is an analog interconnect matrix allowing access to analog modules ADC, ACMP, and IDAC on a flexible selection of pins. Each APORT bus consists of analog switches connected to a common wire. Since many clients can operate differentially, buses are grouped by X/Y pairs.

### 3.9.2 Analog Comparator (ACMP)

The Analog Comparator is used to compare the voltage of two analog inputs, with a digital output indicating which input voltage is higher. Inputs are selected from among internal references and external pins. The tradeoff between response time and current consumption is configurable by software. Two 6-bit reference dividers allow for a wide range of internally-programmable reference sources. The ACMP can also be used to monitor the supply voltage. An interrupt can be generated when the supply falls below or rises above the programmable threshold.

### 3.9.3 Analog to Digital Converter (ADC)

The ADC is a Successive Approximation Register (SAR) architecture, with a resolution of up to 12 bits at up to 1 MSamples/s. The output sample resolution is configurable and additional resolution is possible using integrated hardware for averaging over multiple samples. The ADC includes integrated voltage references and an integrated temperature sensor. Inputs are selectable from a wide range of sources, including pins configurable as either single-ended or differential.

### 3.9.4 Digital to Analog Current Converter (IDAC)

The Digital to Analog Current Converter can source or sink a configurable constant current. This current can be driven on an output pin or routed to the selected ADC input pin for capacitive sensing. The current is programmable between 0.05  $\mu$ A and 64  $\mu$ A with several ranges with various step sizes.

## 3.10 Reset Management Unit (RMU)

The RMU is responsible for handling reset of the BGM11S. A wide range of reset sources are available, including several power supply monitors, pin reset, software controlled reset, core lockup reset and watchdog reset.

## 3.11 Core and Memory

### 3.11.1 Processor Core

The ARM Cortex-M4F processor includes a 32-bit RISC processor integrating the following features and tasks in the system:

- ARM Cortex-M4F RISC processor achieving 1.25 Dhrystone MIPS/MHz
- Memory Protection Unit (MPU) supporting up to 8 memory segments
- 256 KB flash program memory
- 32 KB RAM data memory
- Configuration and event handling of all modules
- 2-pin Serial-Wire debug interface

### 3.11.2 Memory System Controller (MSC)

The Memory System Controller (MSC) is the program memory unit of the microcontroller. The flash memory is readable and writable from both the Cortex-M and DMA. The flash memory is divided into two blocks; the main block and the information block. Program code is normally written to the main block, whereas the information block is available for special user data and flash lock bits. There is also a read-only page in the information block containing system and device calibration data. Read and write operations are supported in energy modes EM0 Active and EM1 Sleep.

### 3.11.3 Linked Direct Memory Access Controller (LDMA)

The Linked Direct Memory Access (LDMA) controller features 8 channels capable of performing memory operations independently of software. This reduces both energy consumption and software workload. The LDMA allows operations to be linked together and staged, enabling sophisticated operations to be implemented.

### 3.12 Memory Map

The BGM11S memory map is shown in the figures below.

Figure 3.3. BGM11S Memory Map — Core Peripherals and Code Space

Figure 3.4. BGM11S Memory Map — Peripherals

### 3.13 Configuration Summary

The features of the BGM11S are a subset of the feature set described in the device reference manual. The table below describes device specific implementation of the features. Remaining modules support full configuration.

Table 3.2. Configuration Summary

Module	Configuration	Pin Connections
USART0	IrDA SmartCard	US0_TX, US0_RX, US0_CLK, US0_CS
USART1	IrDA I <sup>2</sup> S SmartCard	US1_TX, US1_RX, US1_CLK, US1_CS

## 4. Electrical Specifications

### 4.1 Electrical Characteristics

All electrical parameters in all tables are specified under the following conditions, unless stated otherwise:

- Typical values are based on  $T_{AMB}=25\text{ }^{\circ}\text{C}$  and  $V_{DD}=3.3\text{ V}$ , by production test and/or technology characterization.
- Radio performance numbers are measured in conducted mode, based on Silicon Laboratories reference designs using output power-specific external RF impedance-matching networks for interfacing to a  $50\ \Omega$  antenna.
- Minimum and maximum values represent the worst conditions across supply voltage, process variation, and operating temperature, unless stated otherwise.

Refer to [Table 4.2 General Operating Conditions on page 17](#) for more details about operational supply and temperature limits.

#### 4.1.1 Absolute Maximum Ratings

Stresses above those listed below may cause permanent damage to the device. This is a stress rating only and functional operation of the devices at those or any other conditions above those indicated in the operation listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability. For more information on the available quality and reliability data, see the Quality and Reliability Monitor Report at <http://www.silabs.com/support/quality/pages/default.aspx>.

**Table 4.1. Absolute Maximum Ratings**

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Storage temperature range	$T_{STG}$		-40	—	+85	$^{\circ}\text{C}$
External main supply voltage	$V_{DDMAX}$		0	—	3.8	V
External main supply voltage ramp rate	$V_{DDRAMPMAX}$		—	—	1	V / $\mu\text{s}$
External main supply voltage with DC-DC in bypass mode			1.85		3.8	V
Voltage on any 5V tolerant GPIO pin <sup>1</sup>	$V_{DIGPIN}$		-0.3	—	Min of 5.25 and IOVDD +2	V
Voltage on non-5V tolerant GPIO pins			-0.3	—	IOVDD+0.3	V
Max RF level at input	$P_{RFMAX2G4}$		—	—	10	dBm
Total current into VDD power lines (source)	$I_{VDDMAX}$		—	—	200	mA
Total current into VSS ground lines (sink)	$I_{VSSMAX}$		—	—	200	mA
Current per I/O pin (sink)	$I_{IOMAX}$		—	—	50	mA
Current per I/O pin (source)			—	—	50	mA
Current for all I/O pins (sink)	$I_{IOALLMAX}$		—	—	200	mA
Current for all I/O pins (source)			—	—	200	mA
Voltage difference between AVDD and VREGVDD	$\Delta V_{DD}$		—	—	0.3	V

**Note:**

1. When a GPIO pin is routed to the analog module through the APORT, the maximum voltage = IOVDD.

## 4.1.2 Operating Conditions

The following subsections define the operating conditions for the module.

### 4.1.2.1 General Operating Conditions

**Table 4.2. General Operating Conditions**

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Operating temperature range	T <sub>OP</sub>	Ambient temperature range	-40	25	85	°C
VDD Operating supply voltage <sup>1</sup>	V <sub>VDD</sub>	DCDC in regulation	2.4 <sup>3</sup>	3.3	3.8	V
		DCDC in bypass, 50mA load	1.85	3.3	3.8	V
VDD Current	I <sub>VDD</sub>	DCDC in bypass	—	—	200	mA
HFCLK frequency	f <sub>CORE</sub>	0 wait-states (MODE = WS0) <sup>2</sup>	—	—	26	MHz
		1 wait-states (MODE = WS1) <sup>2</sup>	—	38.4	40	MHz

**Note:**

- The minimum voltage required in bypass mode is calculated using R<sub>BYP</sub> from the DC-DC specification table. Requirements for other loads can be calculated as  $V_{VDD\_min} + I_{LOAD} * R_{BYP\_max}$
- In MSC\_READCTRL register
- The minimum voltage of 2.4 V for DCDC is specified at 100 mA

### 4.1.3 DC-DC Converter

Test conditions:  $V_{DCDC\_I}=3.3$  V,  $V_{DCDC\_O}=1.8$  V,  $I_{DCDC\_LOAD}=50$  mA, Heavy Drive configuration,  $F_{DCDC\_LN}=7$  MHz, unless otherwise indicated.

**Table 4.3. DC-DC Converter**

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Input voltage range	$V_{DCDC\_I}$	Bypass mode, $I_{DCDC\_LOAD} = 50$ mA	1.85	—	$V_{VREGVDD\_MAX}$	V
		Low noise (LN) mode, 1.8 V output, $I_{DCDC\_LOAD} = 100$ mA, or Low power (LP) mode, 1.8 V output, $I_{DCDC\_LOAD} = 10$ mA	2.4	—	$V_{VREGVDD\_MAX}$	V
		Low noise (LN) mode, 1.8 V output, $I_{DCDC\_LOAD} = 200$ mA	2.6	—	$V_{VREGVDD\_MAX}$	V
Output voltage programmable range <sup>1</sup>	$V_{DCDC\_O}$		1.8	—	$V_{VREGVDD}$	V
Regulation DC Accuracy	$ACC_{DC}$	Low noise (LN) mode, 1.8 V target output	1.7	—	1.9	V
Regulation Window <sup>2</sup>	$WIN_{REG}$	Low power (LP) mode, $LPCMPBIAS^3 = 0$ , 1.8 V target output, $I_{DCDC\_LOAD} \leq 75$ $\mu$ A	1.63	—	2.2	V
		Low power (LP) mode, $LPCMPBIAS^3 = 3$ , 1.8 V target output, $I_{DCDC\_LOAD} \leq 10$ mA	1.63	—	2.1	V
Steady-state output ripple	$V_R$	Radio disabled.	—	3	—	mVpp
Output voltage under/overshoot	$V_{OV}$	CCM Mode ( $LNFORCECCM^3 = 1$ ), Load changes between 0 mA and 100 mA	—	—	150	mV
		DCM Mode ( $LNFORCECCM^3 = 0$ ), Load changes between 0 mA and 10 mA	—	—	150	mV
		Overshoot during LP to LN CCM/DCM mode transitions compared to DC level in LN mode	—	200	—	mV
		Undershoot during BYP/LP to LN CCM ( $LNFORCECCM^3 = 1$ ) mode transitions compared to DC level in LN mode	—	50	—	mV
		Undershoot during BYP/LP to LN DCM ( $LNFORCECCM^3 = 0$ ) mode transitions compared to DC level in LN mode	—	125	—	mV
DC line regulation	$V_{REG}$	Input changes between $V_{VREGVDD\_MAX}$ and 2.4 V	—	0.1	—	%
DC load regulation	$I_{REG}$	Load changes between 0 mA and 100 mA in CCM mode	—	0.1	—	%

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
<b>Note:</b>						
1. Due to internal dropout, the DC-DC output will never be able to reach its input voltage, $V_{VREGVDD}$						
2. LP mode controller is a hysteretic controller that maintains the output voltage within the specified limits						
3. In EMU_DCDCMISCCTRL register						
4. Drive levels are defined by configuration of the PFETCNT and NFETCNT registers. Light Drive: PFETCNT=NFETCNT=3; Medium Drive: PFETCNT=NFETCNT=7; Heavy Drive: PFETCNT=NFETCNT=15.						

#### 4.1.4 Current Consumption

##### 4.1.4.1 Current Consumption 3.3 V (DC-DC in Bypass Mode)

Unless otherwise indicated, typical conditions are: VDD = 3.3 V. T<sub>OP</sub> = 25 °C. EMU\_PWRCFG\_PWRCG=NODCDC. EMU\_DCDCCTRL\_DCDCMODE=BYPASS. Minimum and maximum values in this table represent the worst conditions across supply voltage and process variation at T<sub>OP</sub> = 25 °C.

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Maximum TX power +8dBm rated parts	$POUT_{MAX}$		—	+8	—	dBm
Maximum TX power +2dBm rated parts	$POUT_{MAX}$		—	+2	—	dBm
Minimum active TX Power	$POUT_{MIN}$	CW		-26	—	dBm
Output power step size	$POUT_{STEP}$	-5 dBm < Output power < 0 dBm	—	1	—	dB
		0 dBm < output power < $POUT_{MAX}$	—	0.5	—	dB
Output power variation vs supply at $POUT_{MAX}$	$POUT_{VAR\_V}$	2.4 V < $V_{VREGVDD}$ < 3.3 V using DC-DC converter	—	2.2	—	dB
Output power variation vs temperature at $POUT_{MAX}$	$POUT_{VAR\_T}$	From -40 to +85 °C, PAVDD connected to DC-DC output	—	1.5	—	dB
Output power variation vs RF frequency at $POUT_{MAX}$	$POUT_{VAR\_F}$	Over RF tuning frequency range	—	0.4	—	dB
RF tuning frequency range	$F_{RANGE}$		2400	—	2483.5	MHz

**4.1.8.2 RF Receiver General Characteristics for the 2.4 GHz Band**

Unless otherwise indicated, typical conditions are:  $T_{OP} = 25\text{ }^{\circ}\text{C}$ ,  $V_{DD} = 3.3\text{ V}$ , DC-DC on. Crystal frequency = 38.4 MHz. RF center frequency 2.440 GHz. Conducted measurement from the antenna feedpoint.

**Table 4.12. RF Receiver General Characteristics for 2.4 GHz Band**

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
RF tuning frequency range	$F_{RANGE}$		2400	—	2483.5	MHz
Receive mode maximum spurious emission	$SPUR_{RX}$	30 MHz to 1 GHz	—	-57	—	dBm
		1 GHz to 12 GHz	—	-47	—	dBm
Max spurious emissions during active receive mode, per FCC Part 15.109(a)	$SPUR_{RX\_FCC}$	216 MHz to 960 MHz, Conducted Measurement	—	-55.2	—	dBm
		Above 960 MHz, Conducted Measurement	—	-47.2	—	dBm
Level above which RFSENSE will trigger <sup>1</sup>	$RFSENSE_{TRIG}$	CW at 2.45 GHz	—	-24	—	dBm
Level below which RFSENSE will not trigger <sup>1</sup>	$RFSENSE_{THRES}$		—	-50	—	dBm

**Note:**

1. RFSENSE performance is only valid from 0 to 85 °C. RFSENSE should be disabled outside this temperature range.

#### 4.1.8.3 RF Receiver Characteristics for Bluetooth Low Energy in the 2.4 GHz Band

Unless otherwise indicated, typical conditions are:  $T_{OP} = 25\text{ }^{\circ}\text{C}$ ,  $V_{DD} = 3.3\text{ V}$ . Crystal frequency = 38.4 MHz. RF center frequency 2.440 GHz. DC-DC on. Conducted measurement from the antenna feedpoint.

## 5. Typical Connection Diagrams

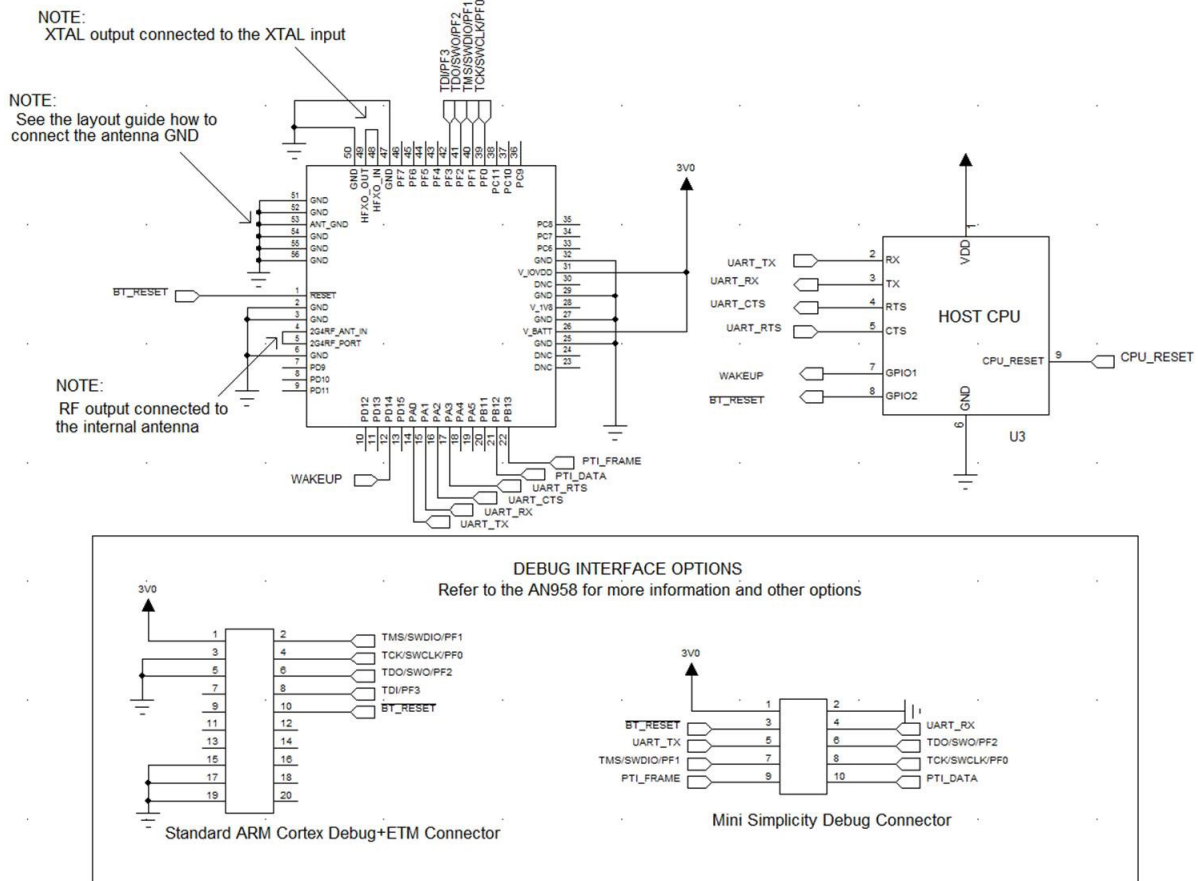

### 5.1 Typical Connections

The figure below shows a typical reference schematic and how to connect:

- Power supplies and Ground pins
- Antenna loop for internal antenna usage
- XTAL loop
- Debug port
- Reset line
- Optional UART connection to an external host for Network Co-Processor (NCP) usage

**Note:** It's recommended to connect the reset line to the host CPU when NCP mode is used.

## 6. Layout Guidelines

For optimal performance of the BGM11S, please follow the PCB layout guidelines and ground plane recommendations indicated in this section.

### 6.1 Layout Guidelines

This section contains generic PCB layout and design guidelines for the BGM11S module. Generally, please follow these guidelines:

- Place the module at the edge of the PCB, as shown in the figures in this chapter.
- Do not place any metal (traces, components, etc.) in the antenna clearance area.
- Connect all ground pads directly to a solid ground plane.
- Place the ground vias as close to the ground pads as possible.

**Figure 6.1. BGM11S PCB Top Layer Design**

Following rules are recommended for the PCB design:

- Trace to copper clearance 150  $\mu\text{m}$
- PTH drill size 300  $\mu\text{m}$
- PTH annular ring 150  $\mu\text{m}$

#### **Important:**

The antenna area must align with the pads precisely. Please refer to the recommended PCB land pattern for exact dimensions.

Figure 6.2. BGM11S PCB Middle and Bottom Layer Design

Figure 6.3. Poor Layout Designs for the BGM11S

Layout checklist for BGM11S:

1. Antenna area is aligned relative to the module pads as shown in the recommended PCB land pattern
2. Clearance area within the inner layers and bottom layer is covering the whole antenna area as shown in the layout guidelines
3. The antenna loop is implemented on top layer as shown in the layout guidelines
4. All dimensions within the antenna area are precisely as shown in the recommended PCB land pattern
5. The module is placed to the edge of the PCB with max 1mm intendation
6. The module is not placed to the corner of the PCB

## 6.2 Effect of PCB Width

The BGM11S module should be placed at the center of the PCB edge because the width of the board has an impact to the radiated efficiency but more importantly there should be enough ground plane on both sides of the module for optimal antenna performance. The figure below gives an indication of ground plane size vs. maximum achievable range.

Figure 6.4. BGM11S PCB Top Layer Design

The impact of the board size to the radiated performance is a generic feature of all PCB and chip antennas and it is not a unique feature of BGM11S. In case of BGM11S the depth of the board is not important and it doesn't impact the radiated performance.

## 6.3 Effect of Plastic and Metal Materials

The antenna on the BGM11S is insensitive to the effects of nearby plastic and other materials with low dielectric constant and no separation between the BGM11S and plastic or other materials is needed. Also the board thickness doesn't have any impact the module.

Any metal within the antenna area or in close proximity to the antenna area may detune the antenna. In this case it is possible to retune the antenna by adjusting the width of the antenna loop. To avoid detuning of the antenna the minimum distance to any metal should be more than 3mm. Encapsulating the module inside metal casing will prevent the radiation of the antenna.

Following picture shows how it is possible to adjust the frequency of the antenna. The antenna is extremely robust against any objects in close proximity or in direct touch with the antenna and it is recommended not to adjust the dimensions of the antenna area unless it is clear that a metal object, such as a coin cell battery, within the antenna area is detuning the antenna.

Figure 6.5. Tuning the Antenna by Adjusting the Width of the Antenna Loop

## 6.4 Effect of Human Body

Placing the module in touch or very close to the human body will negatively impact antenna efficiency and reduce range.

### 7.1.1 GPIO Overview

The GPIO pins are organized as 16-bit ports indicated by letters A through F, and the individual pins on each port are indicated by a number from 15 down to 0.

**Table 7.2. GPIO Pinout**

Port	Pin 15	Pin 14	Pin 13	Pin 12	Pin 11	Pin 10	Pin 9	Pin 8	Pin 7	Pin 6	Pin 5	Pin 4	Pin 3	Pin 2	Pin 1	Pin 0

**Note:**

1. GPIO with 5V compatibility are indicated by (5V)
2. Pins PA2, PA3, PA4, PB11, PB12, PD13, PD14 and PD15 will not be 5V compatible on all future devices.

In order to preserve upgrade options with full hardware compatibility, do not use the pins listed in Note 2 with 5V domains.

## 7.2 Alternate Functionality Pinout

A wide selection of alternate functionality is available for multiplexing to various pins. The following table shows the name of the alternate functionality in the first column, followed by columns showing the possible LOCATION bitfield settings.

**Note:** Some functionality, such as analog interfaces, do not have alternate settings or a LOCATION bitfield. In these cases, the pinout is shown in the column corresponding to LOCATION 0.

**Table 7.3. Alternate functionality overview**

### 7.3 Analog Port (APORT)

The Analog Port (APORT) is an infrastructure used to connect chip pins with on-chip analog clients such as analog comparators, ADCs, and DACs. The APORT consists of wires, switches, and control needed to configurably implement the routes. Please see the device Reference Manual for a complete description.

eE3	2.00 BSC

**Note:**

1. All feature sizes shown are at Maximum Material Condition (MMC) and a card fabrication tolerance of 0.05mm is assumed.
2. Dimensioning and Tolerancing is per the ANSI Y14.5M-1994 specification.
3. This Land Pattern Design is based on the IPC-7351 guidelines.

**Note:** Soldering process specific adjustments may need to be made to the PCB land pattern.

4. The smaller rectangle pads are longer and thinner on the PCB Land Pattern (LPD) than the Package Outline Drawing (POD) (0.2 x 0.5 vs. 0.25 x 0.4). The LPD pad edge aligns with the edge of the POD pads. The centers of the respective pads do not align and that is the cause of the dimensional differences between POD and LPD.
5. Above notes and stencil design are shared as recommendations only. A user may find it necessary to use different parameters and fine tune their SMT process as required for their application and tooling.

### ANTENNA LAYOUT RECOMMENDATION

This section describes the recommended PCB land pattern for the BGM11S with X-Y coordinates of pads and the antenna copper clearance area. The X-Y coordinates of pads relative to the origo are shown in the table. The origo is the center point of pin no 53. It is very important to align the antenna area relative to the module pads precisely. This recommendation is only valid for parts with built-in antenna.

**Figure 8.4. BGM11S Recommended Land Pattern**

**Note:** The provided stencil information is a recommendation and soldering process specific adjustments may need to be made.

**Table 8.4. Layout Recommendation**

## 9. Tape and Reel Specifications

### 9.1 Tape and Reel Packaging

This section contains information regarding the tape and reel packaging for the BGM11S Blue Gecko Module.

### 9.2 Reel and Tape Specifications

- Reel material: Polystyrene (PS)
- Reel diameter: 13 inches (330 mm)
- Number of modules per reel: 1000 pcs
- Disk deformation, folding whitening and mold imperfections: Not allowed
- Disk set: consists of two 13 inch (330 mm) rotary round disks and one central axis (100 mm)
- Antistatic treatment: Required
- Surface resistivity:  $10^4 - 10^9 \Omega/\text{sq}$ .

### 9.5 Moisture Sensitivity Level

Reels are delivered in packing which conforms to MSL3 (Moisture Sensitivity Level 3) requirements.

## 10. Soldering Recommendations

### 10.1 Soldering Recommendations

The BGM11S is compatible with industrial standard reflow profile for Pb-free solders. The reflow profile used is dependent on the thermal mass of the entire populated PCB, heat transfer efficiency of the oven, and particular type of solder paste used.

- Refer to technical documentations of particular solder paste for profile configurations.
- Avoid using more than two reflow cycles.
- A no-clean, type-3 solder paste is recommended.
- A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
- Recommended stencil thickness is 0.100 mm (4 mils).
- General SMT application notes are provided in the AN1223 document.
- For further recommendation, refer to the JEDEC/IPC J-STD-020, IPC-SM-782 and IPC 7351 guidelines.
- The above notes are recommendations only. A customer or user may find it necessary to use different parameters and fine tune their SMT process as required for their application and tooling.

## 11. Certifications

Refer to AN1048 for information related to Regulatory Certifications.

### 11.1 Bluetooth Qualification

The BGM11S modules come with a pre-qualified Bluetooth Low Energy RF-PHY tested Component having Declaration ID of U049546 and QDID of 145424. This Component should be combined with the latest Wireless Gecko Link Layer and Host pre-qualified Components when in the process of qualifying the end-product via the SIG's Launch Studio.

### 11.2 CE

The BGM11S module is in conformity with the essential requirements and other relevant requirements of the Radio Equipment Directive (RED) (2014/53/EU).

Please note that every application using the BGM11S will need to perform the radio EMC tests on the end product according to EN 301 489-17.

The conducted test results can be inherited from the modules test report to the test report of the end product using BGM11S. EN300328 radiated spurious emission test must be repeated with the end product assembly. Test documentation and software for the EN 300 328 radiated spurious emissions testing can be requested from the Silicon Labs support.

It is recommended to repeat the radiated emissions test with the end product

A formal DoC is available via [www.silabs.com](http://www.silabs.com)

### 11.3 FCC

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesirable operation.

Any changes or modifications not expressly approved by Silicon Labs could void the user's authority to operate the equipment.

#### **FCC RF Radiation Exposure Statement:**

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. End users must follow the specific operating instructions for satisfying RF exposure compliance. This transmitter meets both portable and mobile limits as demonstrated in the RF Exposure Analysis and SAR test report. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter except in accordance with FCC multi-transmitter product procedures.

#### **OEM Responsibilities to comply with FCC Regulations:**

The transmitter module must not be co-located or operating in conjunction with any other antenna or transmitter except in accordance with FCC multi-transmitter product procedures.

OEM integrator is responsible for testing their end-product for any additional compliance requirements required with this module installed (for example, digital device emissions, PC peripheral requirements, etc.).

#### **Important Note:**

In the event that the above conditions cannot be met (for certain configurations or co-location with another transmitter), then the FCC authorization is no longer considered valid and the FCC ID cannot be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate FCC authorization.

#### **End Product Labeling**

The BGM11S Bluetooth module is labeled with its own FCC ID. If the FCC ID is not visible when the module is installed inside another device, then the outside of the device into which the module is installed must also display a label referring to the enclosed module. In that case, the final end product must be labeled in a visible area with the following:

**"Contains Transmitter Module FCC ID: QOQ11"**

Or

**"Contains FCC ID: QOQ11"**

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module or change RF related parameters in the user manual of the end product.

## 11.4 ISED Canada

### ISED Canada

This radio transmitter (IC: 5123A-11) has been approved by Industry Canada to operate with the embedded chip antenna. Other antenna types are strictly prohibited for use with this device.

This device complies with Industry Canada's license-exempt RSS standards. Operation is subject to the following two conditions:

1. This device may not cause interference; and
2. This device must accept any interference, including interference that may cause undesired operation of the device

### RF Exposure Statement

BGM11S modules has been tested for worst case RF exposure. As demonstrated in the SAR test report, BGM11S can be mounted in touch with human body without further SAR evaluation.

### OEM Responsibilities to comply with IC Regulations

The transmitter module must not be co-located or operating in conjunction with any other antenna or transmitter.

OEM integrator is responsible for testing their end-product for any additional compliance requirements required with this module installed (for example, digital device emissions, PC peripheral requirements, etc.).

### Important note

In the event that these conditions cannot be met (for certain configurations or co-location with another transmitter), then the IC authorization is no longer considered valid and the IC ID cannot be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate IC authorization

### End Product Labeling

The BGM11S module is labeled with its own IC ID. If the IC ID is not visible when the module is installed inside another device, then the outside of the device into which the module is installed must also display a label referring to the enclosed module. In that case, the final end product must be labeled in a visible area with the following:

**“Contains Transmitter Module IC: 5123A-11 ”**

or

**“Contains IC: 5123A-11”**

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module or change RF related parameters in the user manual of the end product

### ISED (Français)

## ISED Canada (Français)

Industry Canada a approuvé l'utilisation de cet émetteur radio (IC : 5123A-11) avec son antenne intégrée. L'utilisation de tout autre type d'antenne avec ce composant est proscrite.

Ce composant est conforme aux normes RSS, exonérées de licence d'Industry Canada. Son mode de fonctionnement est soumis aux deux conditions suivantes:

1. Ce composant ne doit pas générer d'interférences.
2. Ce composant doit pouvoir être soumis à tout type de perturbation y compris celle pouvant nuire à son bon fonctionnement.

## Déclaration d'exposition RF

Les modules BGM11S ont été testés pour une exposition RF pire case. Comme indiqué dans le rapport de test DAS, BGM11S peut être assemblé en contact avec le corps humain sans évaluation DAS supplémentaire.

## Responsabilités des OEM pour une mise en conformité avec le Règlement du Circuit Intégré

Le module émetteur ne doit pas être localisé ou fonctionner avec un autre émetteur ou une autre antenne que celle indiquée plus haut. Il incombe à l'intégrateur OEM de s'assurer de la bonne conformité du produit fini avec les autres normes auxquelles il pourrait être soumis de fait de l'utilisation de ce module (par exemple, les émissions des périphériques numériques, les exigences de périphériques PC, etc.).

## Remarque Importante

Dans le cas où ces conditions ne peuvent être satisfaites (pour certaines configurations ou co-implantation avec un autre émetteur), l'autorisation IC n'est plus considérée comme valide et le numéro d'identification ID IC ne peut pas être apposé sur le produit final. Dans ces circonstances, l'intégrateur OEM sera responsable de la réévaluation du produit final (y compris le module émetteur) et de l'obtention d'une autorisation IC distincte.

## Étiquetage des produits finis

Le module BGM11S est étiqueté avec sa propre ID IC. Si l'ID IC n'est pas visible lorsque le module est intégré au sein d'un autre produit, cet autre produit dans lequel le module est installé devra porter une étiquette faisant apparaître la référence du module intégré. Dans un tel cas, sur le produit final doit se trouver une étiquette aisément lisible sur laquelle figurent les informations suivantes:

**"Contient le module transmetteur IC: 5123A-11"**

ou

**"Contient le circuit IC : 5123A-11"**

L'intégrateur OEM doit être conscient qu'il ne doit pas fournir, dans le manuel d'utilisation, d'informations relatives à la façon d'installer ou de d'enlever ce module RF ainsi que sur la procédure à suivre pour modifier les paramètres liés à la radio.

## 11.5 Japan

The BGM11S is certified in Japan with certification number 209-J00255.

### Important

The module does is not labeled with Japan certification mark and ID because of the small physical size. Manufacturer who integrates a radio module in their host equipment must place the certification mark and certification number on the outside of the host equipment.

The certification mark and certification number must be placed close to the text in the Japanese language which is provided below.

当該機器には電波法に基づく、技術基準適合証明等を受けた特定無線設備を装着している。

### Translation:

“This equipment contains specified radio equipment that has been certified to the Technical Regulation Conformity Certification under the Radio Law.”

## 11.6 KC South-Korea

BGM11S has certification in South-Korea.

Certification number: MSIP-CRM-BGT-BGM11S

## 11.7 NCC Taiwan

The BGM11S is certified in Taiwan with NCC certification number CCAM19LP0461T0 for BGM11S12A and CCAM19LP0460T1 for BGM11S22A.

BGM11S通过了台湾NCC认证, BGM11S12A认证号为CCAM19LP0461T0, BGM11S22A认证号为CCAM19LP0460T1

The platform manufacturer is required to mark the platform with the following sentences:

- If using BGM11S12A: "This product contains an RF module with ID number CCAM19LP0461T0."
- If using BGM11S22A: "This product contains an RF module with ID number CCAM19LP0460T1."

平台制造商必须在平台上指定:

- 如果使用BGM11S12A: “本产品包含一个ID号为CCAM19LP0461T0的RF模块。”
- 如果使用BGM11S22A: “本产品包含一个ID号为CCAM19LP0460T1的RF模块。”

According to NCC Low Power Radio Wave Radiation Equipment Management Regulations:	
Article 12	A low-power RF equipment that has passed the type approval shall not change the frequency, increase the power or change the characteristics and functions of the original design without permission.
Article 14	<p>The use of low-power RF equipment shall not affect flight safety and interfere with legal communications; if interference is found, it shall be immediately deactivated and improved until no interference is found.</p> <p>Legal communication in the preceding paragraph refers to radio communications operating in accordance with the provisions of the Telecommunications Act.</p> <p>Low-power RF equipment must withstand interference from legitimate communications or radiological, radiated electrical equipment for industrial, scientific, and medical applications.</p>

根據 NCC 低功率電波輻射性電機管理辦法 規定:	
第十二條	經型式認證合格之低功率射頻電機，非經許可，公司、商號或使用者均不得擅自變更頻率、加大功率或變更原設計之特性及功能。
第十四條	<p>低功率射頻電機之使用不得影響飛航安全及干擾合法通信；經發現有干擾現象時，應立即停用，並改善至無干擾時方得繼續使用。前項合法通信，指依電信法規定作業之無線電通信。</p> <p>低功率射頻電機須忍受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。</p>

## 12. Revision History

### Revision 1.3

April 2020

- Added reference to AN1223 and updated [10.1 Soldering Recommendations](#) section.
- Added reference to AN1048 in [11. Certifications](#) section.
- Updated [11.1 Bluetooth Qualification](#) section with the new Declaration ID and QDID.

### Revision 1.2

September 2019

- Added the SoC Family in the front page description.
- Updated Supported Protocol to Bluetooth<sup>®</sup> Low Energy in [1. Feature List](#).
- Updated the Protocol Stack in [Table 2.1 Ordering Information on page 3](#) to Bluetooth<sup>®</sup> Low Energy.
- Replaced Bluetooth<sup>®</sup> Smart with Bluetooth<sup>®</sup> Low Energy wherever applicable.
- Removed Wake On Radio references wherever applicable since this feature is not supported by the software.
- Corrected the RSSI<sub>MIN</sub> and RSSI<sub>MAX</sub> specifications in [4.1.8.3 RF Receiver Characteristics for Bluetooth Low Energy in the 2.4 GHz Band](#).
- Corrected the max Gain error in ADC in [Table 4.22 ADC on page 34](#).
- Corrected the footprint in [Figure 6.2 BGM11S PCB Middle and Bottom Layer Design on page 48](#).
- Updated [Figure 7.2 BGM11S APORT on page 72](#) to clarify the APORT Connection Diagram.
- Divided the APORT table into individual tables based on Analog Peripherals in [7.3 Analog Port \(APORT\)](#).
- Updated package markings with KC certification ID seen in [11.6 KC South-Korea in Figure 8.2 BGM11S Package Marking on page 79](#).
- Updated [Figure 8.3 Module Footprint on page 80](#) and [Table 8.3 PCB Land Pattern Dimensions on page 80](#).
- Added a Note in [Table 8.3 PCB Land Pattern Dimensions on page 80](#) regarding the differences in dimensions between the PCB Land Pattern (LPD) and Package Outline Drawing (POD).
- Added a Note in [Table 8.3 PCB Land Pattern Dimensions on page 80](#) with general guidelines for users.
- Added a legend to and updated the Example Stencil Design in [Figure 8.4 BGM11S Recommended Land Pattern on page 82](#)
- Updated the certification information in [11.1 Bluetooth Qualification](#).
- Updated the French certification text in [11.4 ISED Canada](#).
- Updated section title and certification number in [11.6 KC South-Korea](#).
- Added certification number in [11.7 NCC Taiwan](#).

### Revision 1.1

October 27th, 2017

- b and L dimensions adjusted in the PCB land pattern dimensions
- Maximum TX power for BGM11S12F256GA is amended to +2 dBm, was +3 dBm in earlier data sheet revisions
- ISED Canada certification added to front page certification list
- Power block (Figure 3.2) updated
- Typo in Figure 5.1 title text corrected
- Typo (2 of) corrected in first sentence of Section 5.1
- ISEDC changed to ISEC Canada in Section 11.4

### Revision 1.0

- Pins 26 and 28 swapped in BGM11S pinout figure
- Layout guidelines updated
- Package specifications updated
- Package marking updated
- Soldering recommendations updated
- 1.0 data sheet for full production

**Revision 0.91**

- Layout guidelines updated
- Package specifications updated
- Package marking updated

**Revision 0.90**

- Preliminary version
