#### **FEATURE**

- 1. Small size and light weight
- 2. High reliability and stability
- 3. Reduced size of final equipment
- 4. Lower assembly costs
- 5. Higher component and equipment reliability
- 6. Lead free product is available

# **APPLICATION**

- Mobile phone
- PDA
- Camcorders
- Pagers
- Palmtop computers

#### **DESCRIPTION**

The resistors are constructed in a high grade ceramic body (aluminum oxide). Internal metal electrodes are added at each end and connected by a resistive paste that is applied to the top surface of the substrate. The composition of the paste is adjusted to give the approximate resistance required and the value is trimmed to nominated value within tolerance which controlled by laser trimming of this resistive layer.

The resistive layer is covered with a protective coat. Finally, the two external end terminations are added. For ease of soldering the outer layer of these end terminations is a Lead-tin or Tin (Lead free) alloy.

R≥1MΩ		-300~+500	
$1M\Omega > R > 10\Omega$	≤ ± 100	≤ ± 200	
R≤10Ω	-300~+500	-300~+500	
Max. dissipation @ T <sub>amb</sub> =70°C	1/16 W		
Max. Operation Voltage (DC or RMS)	50V		
Max. Overload Voltage (DC or RMS)	100V		
Climatic category (IEC 60068)	55/155/56		

#### Note:

- 1. This is the maximum voltage that may be continuously supplied to the resistor element, see "IEC publication 60115-8"
- 2. Max. Operation Voltage : So called RCWV (Rated Continuous Working Voltage) is determined by  $RCWV = \sqrt{RatedPower \times Resistance Value} \text{ or Max. RCWV listed above, whichever is lower.}$
- 3. For Resistance range  $1\Omega\sim10\Omega$  and  $1M\Omega\sim10M\Omega$  of tolerance  $\pm1\%$  series No. is WR04W, please refer to specification respectively.

#### **MARKING**

WR04 has no marking on the product overcoat for both 5% & 1%.

# **FUNCTIONAL DESCRIPTION**

#### Product characterization

Standard values of nominal resistance are taken from the E24 series for resistors with a tolerance of  $\pm 5\%$ , and E96 series for resistors with a tolerance of  $\pm 1\%$ . The values of the E24/E96 series are in accordance with "IEC publication 60063"

# Derating

The power that the resistor can dissipate depends on the operating temperature; see Fig.2

As a function of the ambient temperature

# **CATALOGUE NUMBERS**

The resistors have a catalogue number starting with:

#### **MOUNTING**

Due to their rectangular shapes and small tolerances, Surface Mountable Resistors are suitable for handling by automatic placement systems.

Chip placement can be on ceramic substrates and printed-circuit boards (PCBs).

Electrical connection to the circuit is by individual soldering condition.

The end terminations guarantee a reliable contact.

# **SOLDERING CONDITION**

The robust construction of chip resistors allows them to be completely immersed in a solder bath of 260°C for 10 seconds. Therefore, it is possible to mount Surface Mount Resistors on one side of a PCB and other discrete components on the reverse (mixed PCBs).

Surface Mount Resistors are tested for solderability at 245°C during 3 seconds. The test condition for no leaching is 260°C for 30 seconds. Typical examples of soldering processes that provide reliable joints without any damage are given in Fig 3.
