

## Construction

## Introduction

- Constructed by screen printing alternative layers of internal metallic electrodes onto ceramic dielectric materials and firing into a concrete monolithic body, then completed by application of metal end terminations which are fired to assure permanent bonding with the individual internal electrodes

## Applications

- Can be used on surface mount assembly equipment
- Our fully integrated manufacturing and total quality control systems ensure unprecedented high standards of quality and reliability.

## Features

- Large capacitance values in small sizes
- Excellent high frequency characteristics

## Chip Capacitor Selection

### DIELECTRIC TYPE

COG (NPO) Capacitance change with temperature is 0-30ppm/°C which is less than -0.3%/°C from -55°C to +125°C. Typical capacitance change with life is less than -0.1% for NPOs, one-fifth that shown by most other dielectrics. NPO formulations show no aging characteristics.

Ultra stable class I dielectric: linear temperature coefficient, low loss, negligible change of electrical properties with time, voltage and frequency.

Operating Temperature Range	Temperature Coefficient	Temperature Voltage Coefficient ( $\Delta C_{Max}$ @ $V_{DCW}$ )	Dissipation Factor	Insulation Resistance	Dielectric withstanding Voltage	Aging Rate	Test Parameters
-55°C to +125°C	0±30ppm/°C	0±30ppm/°C	0.1% Max, 0.02% Typical	<ul style="list-style-type: none"> <li>• 25°C, <math>V_{DCW}</math>:: &gt;100GΩF or 1000ΩF, whichever is less</li> <li>• 125°C, <math>V_{DCW}</math>:: &gt;10GΩF or 100ΩF whichever is less</li> </ul>	3 X $V_{DCW}$	0% per decade hour	<ul style="list-style-type: none"> <li>• C≤1000pF f=1MHz V=1.0Vrms ±0.2Vrms T=25°C</li> <li>• C&gt;1000pF f=1KHz V=1.0Vrms ±0.2Vrms T=25°C</li> </ul>

X7R/X5R Its temperature variation of capacitance is within  $\pm 15\%$  from  $-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$  ( $-55^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$  for X5R). The capacitance change is non-linear.

Stable class II dielectric

Operating Temperature Range	Temperature Coefficient	Temperature Voltage Coefficient ( $\Delta C_{\text{Max}}$ @ $V_{\text{DCW}}$ )	Dissipation Factor	Insulation Resistance	Dielectric withstanding Voltage	Aging Rate	Test Parameters
X7R = -55C to +125C  X5R = -55C to +85C	$\pm 15\%$	X7R/X5R Not Applicable	2.5% Max, 1.8% Typical	<ul style="list-style-type: none"> <li>• <math>25^{\circ}\text{C}</math>, <math>V_{\text{DCW}}</math>: &gt;100G<math>\Omega</math>For 1000<math>\Omega</math>F, whichever is less</li> <li>• <math>125^{\circ}\text{C}</math>, <math>V_{\text{DCW}}</math>: &gt;10G<math>\Omega</math>F or 100<math>\Omega</math>F whichever is less</li> </ul>	2.5 X $V_{\text{DCW}}$	<2% per decade hour	1KHz, 1.0Vrms $\pm 0.2$ Vrms 25 $^{\circ}$ C values > or = to 10uF 1.0Vrms 120Hz

Z5U Despite their capacitance instability, Z5U formulations are very popular because of their small size, temperature range low ESL, low ESR and excellent frequency response. These features are particularly important for decoupling application where only a minimum capacitance value is required.

Y5V Y5V formulations are for general purpose use in a limited temperature range. They have a wide temperature characteristic of  $+22\%$  -  $82\%$  capacitance change over the operating temperature range of  $-30^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ . Y5Vs high dielectric constant allows the manufacture of very high capacitance values (up to 22MF) in small physical sizes.

High capacitance per unit volume: general purpose product

Operating Temperature Range	Temperature Coefficient	Dissipation Factor	Insulation Resistance	Dielectric withstanding Voltage	Aging Rate	Test Parameters
$-30^{\circ}\text{C}$ to $+85^{\circ}\text{C}$	$+22\%$ - $-82\%$	3.0% Max, 2.0% Typical	10G $\Omega$ or 100 $\Omega$ F whichever is less, $25^{\circ}\text{C}$ , $V_{\text{DCW}}$	2.5 X $V_{\text{DCW}}$	3.0% per decade hour	1KHz, 1Vrms 25 $^{\circ}$ C values > or = to 10uF 1.0Vrms 120Hz

### CAPACITANCE VALUE & TOLERANCE

Determined by circuit requirements. Note that chip prices decrease with lower capacitance value and looser tolerance.

### VOLTAGE

Determined by circuit requirements. Units are designed to exceed the withstanding voltage specification, i.e., the user need not incorporate an additional safety margin.

## CAPACITOR SIZE

Select the smallest unit permitted by the circuit constraints that provides the required capacitance and voltage rating. All Cal-Chip capacitors conform to EIA specifications.

## CAPACITOR TERMINATION

Nickel barrier is standard and recommended for units exposed to repeated solder cycles, to minimize leaching of the termination.

- To peel off the cover tape by the method shown in the right figure apply a peel-off force of 20 gf - 60 gf (card board); 10 gf - 75 gf (plastic tape).
- The cover tape should not touch the top or bottom of the chip.
- If the cover tape has been peeled off it may be difficult to remove the chip due to punch-hole clearance, dirt, and debris. Make sure therefore that no paper waste will adhere to and block the absorption nozzle.
- If the cover tape has been peeled off from the top, stick it back on with a suitable adhesive.
- Follow the illustration for the start and end of the winding operation.

**WARRANTY:** All passive components supplied by Calchip Electronics, 59 Steamwhistle Drive, Ivyland, PA. 18974, are under warranty for a period of 2 years from the date of manufacture. Product will meet or exceed all reliability and test specifications expressed by Calchip for the above mentioned time period provided storage conditions (stated below) are met.

#### Product Storage Instructions:

- 1) Product must be kept away from direct sunlight.
- 2) Product must be stored in the following conditions - Temperature; 5 to 35 degrees Celsius/40 to 95 degrees Fahrenheit  
Humidity; 45 to 85%
- 3) Product to be kept free of moisture, dirt and debris.

**\*\*\*\*\*WHEN THESE CONDITIONS ARE NOT MET, PRODUCT LIFE COULD BE SHORTENED\*\*\*\*\***

**NOTICE:** Specifications are subject to change without notice. Contact your nearest Cal-Chip Sales Office for the latest specifications. All statements, information and data given herein are believed to be accurate and reliable, but are presented without guarantee, warranty, or responsibility of any kind, expressed or implied. Statements or suggestions concerning possible use of our products are made without representation or warranty that any such use is free of patent infringement and are not recommendations to infringe any patent. The user should not assume that all safety measures are indicated or that other measures may not be required. Specifications are typical and may not apply to all applications.
